Thread: [Best Web Development on HF \[Cheap, Fast and Reliable.\]](#)

Cadent - January 20, 2018, 2:57 am

Hey.

I've been doing web development for the last 7 years and have done hundreds, possibly thousands of websites.

My languages:HTML

CSS

Javascript

PHP

What else can I do?Work with other peoples code in order to add/fix features.

Setup servers such as apache/nginx

Install pre-made scripts that you've purchased on CodeCanyon.

Work with Laravel, NodeJS, Wordpress etc.

Lots of more.

My workIdlr (My project, sold, boosts the steam hours of a user using NodeJS.)

Chromaservers

RadioSimulator

Installation of status for Cryptopal

Scannr (My project, scans a text file of OG names and returns available ones.)

Lots, lots more.

Pricing & PaymentPricing starts at \$40 per page, php features are included on top of HTML, CSS and JS.

I request 50% of the total amount upfront before I even start anything. This is to ensure my time isn't wasted.

I accept PayPal and ETH. Paying with ETH will give you a discount.

If I receive a form of payment upfront, I'd be happy to work and receive payments every so often.
