Thread: [Some signatures are buggy](#)

N1l0c - January 20, 2018, 12:08 pm

Sup,

I've been browsing the forums lately and I often see this happening when somebody is using a .gif signature.

Spoiler [\(Click to View\)](#)

So it bugs around the whole post. Tried with different browsers and all have the same problem.

Thanks.

Saltpeter - January 20, 2018, 12:10 pm

I haven't seen this before. Have you tried it on different systems too?

Same. Have yet to see this issue.

Malicious` - January 20, 2018, 12:12 pm

Haven't seen this happen either. Strange.

Nuworld - January 20, 2018, 12:27 pm

As others have said.

I don't see this on my end.

Maybe try a browser refresh. Control-F5

N1l0c - January 20, 2018, 12:47 pm

I tried doing ctrl f5, but didn't work. Have this issue for like 2 days now.

Not sure how relevant this is but have you tried clearing your cache?

oRequiem - January 20, 2018, 2:28 pm

It doesn't show that for me for anyone on the forum.

When was this discovered?

wit - January 20, 2018, 2:32 pm

i got this error once and i jus uninstalled HFX

I have been using HXF from day one and have never had this problem.

AFAIK HFX has been frequently updated since then. I too am running the legacy version (along with my own modifications) and have no seen any issues. But maybe if I updated to the more recent one, these issues would begin?

Just a thought.

I just updated to the latest version the other day.
So far no issues.

Omniscient - January 22, 2018, 2:47 pm

Seems an issue with your plugins or extensions.
