Thread: [\[Question\] How do I generate a large amount of BTC wallet addresses?](#)

Tsukiri - January 21, 2018, 4:48 am

Good evening,

I am in need of a huge amount of BTC addresses for a project of mine. Lets say I need ~20,000 BTC addresses.

Obviously, I need to have access to those addresses myself and nobody else can have access to them.

I tried Electrum, but it only lets me generate 20 wallets at a time.

Does anyone know of a way to generate like atleast 1000 BTC addresses at once?

Thanks in advance.

You can take a look at <https://www.bitaddress.org/>. They provide a bulk option.

Offline version is here: <https://github.com/pointbiz/bitaddress.org>
