How to gain Instagram followers

I've been distant from HF lately, mainly due to the fact that I've been working a lot and busy on other things so I figured I'd spread out a few tutorials within the next couple of days that I know of that some people may not know, or may have tried contacting someone posting this method that asked members to post below and/or to PM them. Well, I will be posting this method directly below, instead of beating around the bush. Enjoy

Requirements for this tutorial:

1. A mobile device or emulator capable of running instagram
2. At least 1 hour of work each day.

What will this do to help me make money?

This method will allow you to start a fresh instagram or add-on to an existing account. This method will help you gain a very scale-able amount of followers, that are real people. These followers can be then networked through, using this method a second time with a new account and networking both accounts. TLDR: You will gain followers susceptible to follow more of your own made accounts.

Want the method? Click on the spoiler drop-down below. Be sure to leave feedback below!

To start this method, you will either need an existing Instagram account or a new account of your choosing. This is not a method that scales to each individual style of followers/niches i.e animal lovers and stoners, ewhores are not separated or filtered here. These followers only share one thing in common. Gullibility.

If you are creating a new account, do not worry about the name. Try to keep the name something to do with either:

Financial Stability (Money/luxuries), Money Flippers(People who flip stuff like WU etc), or, the safest pick, something along the lines of a Giveaway.

This method, you will be making your account look as though you are a new page that's doing a big giveaway to the first X-XXXXX number of followers.

Profile picture consisting of money, or text that indicates a money giveaway are essentials. As well as making your bio something along the lines of these:

Code In honor of opening our new account/shop/store/brand/page, we're doing a giveaway for (money/clothing items/items/free stuff) to the first 500-5000 followers! Just follow us, and repost our contest picture. Then post done #yourhashtagCode Money Giveaway! Free \$50 to the first 5,000 people that follow, repost and use our hashtag! #yourhashtag DM us after entering

This method only requires time as you will be needing to post pictures around the clock, every 15 minutes or so with at least 20-40 hashtags that will be listed below. These hashtags are full of people who go on Instagram, and click through finding stuff. Tell me, have you ever looked up

#moneygiveaway? Cause I sure as hell haven't, and yet when you post it seems to bring in great volume.

You will see followers the same day, and that is a promise. Especially if you use pictures that have text in them (photoshop, paint it doesn't matter, get someone on HF to make something simple to post). How often you post, how often you follow people back and engage in the hashtags that you're posting in, you can really scale the number of followers.

Do note that people will annoy the fuck out of you. Don't message them back honestly, it's better not to than to say something out of line. If anything you tell them that there's a deadline and that said person is already locked in with their spot for the money. You CAN respond to them with that saying if you want to, and to make it seem even more legit you can ask them how they want to be paid or what their paypal email is etc etc. Like I said, gullibility is key here.

Hashtags:

Code You should create your own unique hashtag, like #paypalcontest, #paypalgiveaway2018 etc. AND ALSO use these hashtags while posting pics

#giveaway

#free

#freebie

#freemoney

#win

#winmoney

#prizes

#cash

#rich

#luxuries

#contest

#moneygiveaway

#getrich

#richlife

#spoiled

#follow

#repost

Method Loop-hole

Just as you've seen on Instagram, whether it's a cars page, sexy girls page, stoner page whatever. They all re-brand themselves and shout themselves out to each and every page they own. This does multiple things as a chain reaction. You're mixing a car scene following base, a sexy girl following base, and money following bases etc, and then throwing them to each account giving each niche account MULTIPLE niche networks. See what I'm sayin?

You can create more accounts as you go through with these from the method. And as always you can just create the niche accounts and engage in hashtags that relate to your niche if you're looking for that route. This method isn't for growing an Instagram to bring income from sales, it's more so to grow the instagram account fast, and to sell it fast.

Simple method, not really made into a huge type up or anything crazy appealing on the eyes but as I said above I wanted to get this out there ASAP and without any hassle. So enjoy.
