Thread: [Attacks in the lan network](#)

Cicada 3302 - January 27, 2018, 3:56 am

Hi

What are the attacks in the lan network? Any list?

Uose - January 27, 2018, 6:42 am

What are the attacks in the lan network any list?

I dont know what u mean Ip attack(person) or Website

For the attack(ddos) you must have VPS + BOOTNET script + use VPN/PROXY

if you don't have this buy or try on the internet any botnet online(i do not recommend it)

CyberStrike - January 27, 2018, 1:59 pm

Some of these are post exploitation as well but it's a very complete list

depending on what you want to accomplish and what the network environment looks like are the two main things to figure out to know what you can do to try and exploit it for anything.

You know every device has an IP address, right? Most of the times the IP address of a "person" is actually the address of their router.

rofl .. we should have asked if maybe he is a cyborg or has a router implanted or something. ?

JohnG0tti - January 28, 2018, 11:23 am

what OS do u use?

u can do pent testing but its not attacking its info gathering.

Actually pentesting involves attacking too, information gathering is only the very first phase of a full pentesting session.

This is probably the best answer. Though the OP is probably very new and would get confused by the depth of ATTACK. OP what you are asking for is very complicated so maybe you can provide us with more details.

CyberStrike - January 28, 2018, 12:30 pm

I know that giving that link is just throwing someone out into the ocean while chumming, but then they can see that a strong foundational know how is probably going to be the best course of action, instead of going off an attacking a live or non-safe environment they may get confused and reconsider, maybe a bit of time also they can change their mindset as well after gaining some knowledge and respect for the people doing their job in good faith and having to deal with unauthorized attackers.
