Thread: [Convert big number to small number](#)

deadsh0t - January 31, 2018, 2:33 am

So i have 150862738402486 which is actually 1508.62738402486 coins so i want to let it convert so it is correct if i want to send 1508.62738402486 coins i need to input 150862738402486 so the user needs to input that as well so i searched for few hours now but cant find a solution so i am looking for a function that can convert 1508 (wich is a normal user submit) to 150800000000000 for the input to the json rpc server and vice versa because i am showing the balance on the user page

Seife?r - January 31, 2018, 2:50 am

Either I am not understanding the question correctly or you can just multiply the input of the user by 100000000000 then divide to show the balance?

RumbleFrog - January 31, 2018, 4:44 am

Uhm, you just multiply by 100000000000?
