As I don't own Eagle Eye, contact Adderall on skype (check out OP; thread design) and he'll figure it out.

//EDIT:

Adderall did test EagleEye and it worked perfectly.

Added to compatibility list.

INFORMATION

AdderallProtector v1.3 was released with an instant avast sandbox breakout! No longer annoying deepscreen scanning the file 15s +.

+ Improved stability

+ Improved obfuscation

and the what actually made my day:

I submitted a crypted file to Avast CyberCapture yesterday and 300mins later, I got an answer. It said:

"Avast Viruslab says:

This file is safe

fuck1337.exe

Anyways, thank you for your submission. The bigger our database is, the better can we protect you and other 400 million users."

Ah, right. Don't even try sales trashing.

If the customer wants, we can revert the sale and I ban his license. No problem.

I really don't care about money. And yes, it is autobuy.

on HF everything what is negative is sale trashing.

there is a difference between spreading lies and true words.

and as i can see your "autobuy" requires to pm you.

what kinda misses the point, doesnt it ?

Update released!

- reduced stub size a lot
- fixed runtime detections

I'm very proud to show you our new runtime result which is completely undetected! Although I didn't use malware or startup here, it shows the high quality of AdderallProtector. For only \$12/month, we are offering the best price-performance ratio! We decided to raise the price for all packages soon, so quality will surely sustain.

You can use other tools such as winrar and iexpress to bind a file. You can also just do a downloader and download the stub then the binded file.

I don't use skype due to security reasons, but if you send me a DM it will be fine since nobody else can see it and the password can only be used once.

PerfectStorm - February 14, 2018, 1:25 am

Purchased just to check it out, I did one test overall impressions are simple GUI somewhat lacking in settings but overall functional and fluid. I originally got 4 detections upon my first crypt.

I'm getting an error after I've run the crypter and tried to launch the crypted exe, which is telling me that i need .net 4.. framework installed for the application to run. The original exe runs fine before crypting. Any ideas?

Its because AdderallProtector written in C# using the .net framework 4 meaning any programs you crypt will require .net framework 4 to be installed.

Does not work with DarkTrack (tried multiple ways, but no luck)...never outputs final file. Does, however, work with NanoCore, unless the file is greater than roughly 10mb or so.

This leads me to my question: is there a file size limit when crypting and binding? i can do both fine if I use, say, a file size of about 5 mb. If I try to do the same to a file of about 20 mb, no luck. The process hangs after a couple of minutes and the final file is never created. Would LOVE (LOVE) to be able to work with file sizes larger than 5mb for instance. Is there a limit?

other than that, I will say that I think this product is great. When I can get it to work properly, I can test it with a fairly high degree of success.

It's just a question because if this crypter isnt do what they say on first page it's not a good option.

does not say that I use it or not!

And I'm sure for educational use we can do anything with #, Orcus or any Rat.

You might want to read Orcus's TOS again

Runtime scan result with Quasar:

https://dyncheck.com/scan/id/56972da88d319f3458c103623acda4d0#collapse_info

With # unfortunately the file doesn't work at all (throws some RegAsm.exe errors)

Edit: The crypter isn't that bad as I initially thought, with Quasar it has a good execution rate (without AV), not like other crypters which keep throwing errors... but the runtime scan result was really bad.

Na it will not bypass ESET runtime, no crypter here on HF can.

But it does bypass all other famous AVs

Do you mind telling me if the binding process works with any document (.doc) file or Excel file ? or can it bind the .exe to literally anything (pictures, documents, music,etc) ?

I have just bought it, and Im having few problems - the screen shows me "waiting for server to build file" for the past 15 minutes and still waiting (sorted), also I tried to bind it to a .pdf file but I dont get an option to get a .pdf extension just .exe.

Ps. is there any good settings for Quasar? I am trying all the settings available but then it ruins the build.exe , and when opening it wont work...

-any quick way of getting in touch with you? skype perhaps ?

Hope you can help me, best regards.

My dude, chill out, I bought the one month version, I'm still giving the OP the benefit of the doubt, let's wait for him to respond, for now it just looks like a normal vb program that just changes the icon and info of any file, nothing special... Doesn't look or feel like a crypter, but again let's wait for OP, if things are not amended then I will have to take action on the matter, hopefully OP is a man of word and loyalty. I guess I could say "you get what you pay for"....

It's been 9 hours already, I'm unsure if he will really run away with \$19... Lol, I'm getting to see a scam as the minutes go by, before I bought the product, he was very kind and helpful but now he is not even responding... Hopefully you don't make a fool of yourself, looking forward to hear from you.

I wait your pm said instal 2 stub in vm and I checked it s good and buy your crypter.

borito80 - August 17, 2018, 1:14 am

There are quite a lot of looking for crypters that work well with native miners.
It is important that it be FUD runtime and kept long enough until the stub update.

Could I send the miner for you to test if it is FUD runtime?

Then I would buy it like other users.

Thanks for testing bud ?

Honestly bro, i have been using Adderall for a while now , and everything seems perfect , but since last night i have been trying to crypt both nanocore and netwire and i'm not having any success getting the crypted file to report, unencrypted stub reports fine. So basically i'm kinda frustrated and don't know what exactly is happening. It doesn't happen like this before, so i think maybe an update will help. Cos is been like like this all day. But all the same, this is the best Crypter on HF. Quote me.

Just be patience please

Menace 2 Society - September 18, 2018, 3:52 pm

For all you people that are complaining, let the coder do his work and, and when he is finished DON'T UPLOAD TO VIRUS TOTAL!!!

Use the stub only for important stuff. If you just want to test the stub and upload to AV'S to see detection, don't waist our/yours time. You f*%k things up for the coder and other serious customers.

Let's keep detection rate low as possible. Thank you.?

donat2013 - September 19, 2018, 7:08 am

As for me i got 2/23 detection and i have no problem with that, but my problem is after crypting Agent Tesla with Adderall crypter, I tested the file on my virtualBox with avast antivirus active and the file run smoothly but did not bring recovery, then i disabled the antivirus and run the same file again now everything was recovered. This has been the more reason why i have not received any log from any client since past one month.

So please Adderall, i would like to suggest you test this complain in your PC to find out what antivirus does to stop logs from delivering even though the file is not detected. I have experienced this many times, i hope you will look into this issue.

LOL "abandoned project"....

Are you insane?

Its not abandoned and is FUD!. LOL

You must not know the basic on how to use a crypter if you getting GEN detections, change, icon, assembly.

Do not POST on the sales thread looking for support

You can contact me via Skype, XMPP, HF PM!

Online and able to assist anyone.

Lol, are you telling me that \$19 crypter is staying fud for one week? please post latest scan result

kawinhill1112 - November 25, 2018, 1:12 am

is this crypter still FUD

Tituspavel - November 26, 2018, 2:38 am

Not it s fud and have bad support

People if need offering support not offer.

It s outside crypter.

Not buy.

If you want buy crypter, buy crypter have daily update and not have detection 4/23

Fulya Donmez - November 26, 2018, 2:49 pm

No update for the past one week now

Barsoumian007 - November 28, 2018, 11:21 am

IT IS COMPATIBLE WITH HAWKEYE??

Deface - November 28, 2018, 11:58 am

Not FUD anymore... I bought a month plan which is kinda sad cus i got to use it for only 1 crypt before it became detected by AV's.

Is there any ways I get a refund? I bought it a week ago and it was fud..

Barsoumian007 - November 28, 2018, 1:44 pm

hello.. please i bought adderall protector!! it's taking forever to build server..
kindly assist me ASAP.

Please reset my HWID my user is: mh

Thanks.

Fulya Donmez - November 28, 2018, 10:46 pm

The crypter is not crypting, telling me (waiting for server to build file) and it stays like that and never build any file

Barsoumian007 - November 29, 2018, 12:59 am

The crypter is not crypting

Another Crypter Scam, that's why CyberSeal is best in terms of maintaining the product running since 2010, I am not saying his crypter is good but in business point of view he is far better than all of you.

foxtrott50 - December 10, 2018, 3:20 pm

i paid for a lifetime license, do i get a refund. It will be safe to say that Aspirecrypt will suffer the same fate and we should just prepare right?

This is why i dont buy from anyone that accepts only bitcoin pay by the month. I know more in long run but safest.

H4x10r - December 16, 2018, 8:04 am

Yes so whats about the Lifetime Members ?
Do they get a Refund ?

that's a real "short" lifetime

we should get a license for your other crypter with the same value.
that would be fair and also a promotion for the new product

My other crypter has nothing to do with adderallprotector.

Pm me maybe we can figure out a discount or smth.

Now stop posting here lol
