Thread: [Want someone to make bot for top down grindy RPG](#)

vGospel - February 1, 2018, 4:33 pm

Hello Coders/bot developers.

I am looking to have a bot made up for a game that is similar to the diablo but will be a lot simpler to make a bot for.

The game is called Hero Siege (http://store.steampowered.com/app/269210/Hero_Siege/)

I won't be reselling this so I'm not asking for a function that adds keys.

The bot will need to be able to:

Create a private lobby,

Navigate to and create a wormhole,(this is basically their version of a rift)

Be able to navigate the randomly generated levels and kill mobs/bosses.

Loot gear of a certain grade.

I can gift a copy of the game so you can test it out if need be.

Will also provide you with login details so you can have an account that is already able to do wormholes

Mainly doing this because I'm lazy as fuck but want to play the high gear end of the game.

Please PM an expected pricing (I know this is likely to change) so I can decide if I am able to proceed with the deal.

Not going to scumbag this guys.

I'm willing to pay a decent amount if your work is done well.

What sort of anti-cheat do they have in place?

As far as I know, nothing in terms of botting.

A lot of their bans are manual and against people who are obvious hackers (e.g. they edit their levels)

still looking for this.

Doesn't have to be made right away. If you have other projects I can wait!
