Thread: [How to apply SSL On site](#) | [My web-site doesn't show secured](#) | [any Help friends?](#) |

hostov - February 2, 2018, 1:05 am

Hello friends , I am finishing up my web-hosting site : [www hostovo com](#)
everything is done and I have generated CSR and installed certificate of COMODO ECC .

the informative shows: certificate is installed on website but it doesn't show green color .

Note : I am new in development fields so I will appreciate everyone feedback and answers about my website . if you guys found any issue/change on my site you can update me , I am still working to make it better .

what could be the possible issue for not showing secure connection friends ?

Tech?NO - February 2, 2018, 1:11 am

<https://prnt.sc/i91la0>

Clear your cache, bro! :)

pmxd - February 2, 2018, 2:49 am

Wouldnt all the assets on your website have to be HTTPs for it to show the green lock aswell?

Example:

Code <form
action="http://themelooks.us12.list-manage.com/subscribe/post?u=50e1e21235cbd751ab4c1ebaa&
amp;id=ac81d988e4" method="post" name="mc-embedded-subscribe-form" target="_blank"
id="subscribeForm" novalidate="novalidate">shouldnt this start with https? im not really sure tho.

FamousHater - February 2, 2018, 2:55 am

everything is done?

then why is their a weebly ad on your homepage lmao

Malicious` - February 2, 2018, 3:02 am

at first thanks to all user for valuable response on my question , so you mean to say , every links in

file must be start with https not with "http " only ?

okay I will do correct those things brother.

.....
I know these issue and working on these errors to remove from my site but , are you sure brother that because of this issue , on site it is not showing secure connection .

Rushax - February 2, 2018, 12:14 pm

Just seen the site and the only thing that isn't making it HTTPS fully now is the form in which it's been sent to.

It will not show a fully HTTPS sign if information is being sent from a HTTPS > HTTP script.

Code <form action="http://billing.ywhmcs.com/domainchecker.php?systpl=EcoHostingV1C1">
The subdomain/script this is pointing to doesn't have a HTTPS certificate installed though so you'll have to add that as well.

Alternatively you could just setup a new script on your server side that includes the information received from the form and send it to this sub-domain using a cURL script.

To start it off:

```
Code <?php
$domain = $_POST["domain"];
$ext = $_POST["ext"];
```

.. cURL request here.

```
?>
```

However I don't think this isn't your script as it's a separate domain.

The image errors in the console are not the reason for the HTTPS issue, they're simply just a 404 which is fine.

thank you so much friend , you really Helped me well to solve out the issues . I am thankful of you . I am new in development fields and keep on improving my knowledge . I here by thanks all the experienced user who have taken out time to have a look on my site to answer my question .

I will request moderator to close this topic now .
once again thanks :)

Note : there are some usual errors on my site which I will soon remove and post a new well thread

about my service , hope to take participative and being helpful for needed one .

Your actual solution to the issue is http:// instead of https:// fix that and you're done.

Rushax - February 2, 2018, 5:12 pm

However the thing is, it's showing an invalid certificate and warning message (Chrome) if anyone searches for a domain name.

Also there's a typo: populer > popular.
