Thread: [FTP Browser](#)

Ghostenigma - February 6, 2018, 4:48 am

Hello

I am releasing this FTP Browser I made in the past to steal ftp addresses from some digital linux tv boxes(The program is fully working)

A philosopher called Volter has said: "The intelligence of persons it looks from the way they are making questions."

I hope you send me some feedback(or questions:P) "Joking"

I will list two important reasons why you have to use this.(this was to make them use my ftp program to be able to get the login details lol)

First.

My program it's more faster in upload and download than Filezilla(yeah, believe it)

Second.

Less buttons are needed to be clicked for example to read files!In my program you can read a file only by double clicking on desidered file and will be opened for editing on the right side of the program(not in a new window)

Other options are present but I will post some photos and mabye a video to see it in live action.

[Download Link](#) Link Updated

FryPan - February 6, 2018, 4:49 am

Yo thats fucking sick

I've been looking for something that looked better than FileZilla actually, I'll check this out later. ty

HFDone - February 6, 2018, 5:19 am

download not working for some reasons

edit - can you add mega thanks

Ghostenigma - February 6, 2018, 5:34 am

Link updated.Now uploaded to mega

thanks good to see you here again after long time ?

Ninja - February 6, 2018, 7:15 am

Why not use GitHub instead?

DeadKube - February 6, 2018, 9:41 am

(Feb 6, 2018 08:15 AM)Ninja Wrote: [\[CITE\]](#) Why not use GitHub instead?

Have you looked at this code?

If this was on github, he would get negative star ratings. Let me just name a few things:

No naming convention in variables and user controls, at all

Bizarre error handling (just a generic try catch all approach with no extra information except for: error connecting

Bizarre image resources with no real naming convention either, probably some stolen copyrighted material in there too

I hope you're hungry for some genuine spaghetti code

Copyright 2015? lol? Is this one from the old glove box?

And here come the whuts:

Whut #1:

Code sr.Close() 'This is fine actually

sr = Nothing 'wtf

request = Nothing 'wtf

Whut #2:

Code Dim myChildPercentage As Decimal = CDec(myNodeCount) /

CDec(TreeView1.GetNodeCount(True)) * 100 'wtf is this even doing here?

Whut #3: Gotta catch them all and not even show the user what the fuck went wrong

Code Catch ex As Exception

HuraAlertBox1.AlertStyle = HuraAlertBox.Style.Warning

HuraAlertBox1.Show()

HuraAlertBox1.Text = "Error Connecting"

End Try

Whut #4: Oh god my eyes and my performance

Code If str.Contains(".mp4") Or str.Contains(".MP4") Or str.Contains(".mkv") Or
str.Contains(".mpeg2") Or str.Contains(".mpeg4") Then

ImageList1.Images.Add(My.Resources._1426561376_Significon_YouTube_32)

Elseif str.Contains(".mp3") Then

ImageList1.Images.Add(My.Resources._1426561889_Music_Note)

Elseif str.Contains(".m3u") Then

ImageList1.Images.Add(My.Resources.M3U_File)

Elseif str.Contains(".") Then

ImageList1.Images.Add(My.Resources._1426561177_Text_Document)

Else

ImageList1.Images.Add(My.Resources._1426561639_folder_open)

End If

Whut #5: Hi, I'm useless ghost code.

```
Code Private Sub client_DownloadProgressChanged(sender As Object, e As DownloadProgressChangedEventArgs)
```

```
End Sub
```

Whut #6: My eyes...

```
Code If byteCount >= 1073741824.0 Then
    size = [String].Format("{0:##.##}", byteCount / 1073741824.0) + " GB"
Elseif byteCount >= 1048576.0 Then
    size = [String].Format("{0:##.##}", byteCount / 1048576.0) + " MB"
Elseif byteCount >= 1024.0 Then
    size = [String].Format("{0:##.##}", byteCount / 1024.0) + " KB"
Elseif byteCount > 0 AndAlso byteCount < 1024.0 Then
    size = byteCount.ToString() + " Bytes"
End If
```

I'm gonna stop here. Seen enough. Don't take this the wrong way. Please improve ;)

I seriously 100% doubt it that your spaghetti code will run faster than FileZilla. In fact, benchmarks on my side prove just the contrary.

Ghostenigma - February 6, 2018, 1:41 pm

Its an old project and I don't even have vbnet installed anymore. I just posted for those who might find it useful.

For me in that time did the job!

The world itself isnt perfect so don't expect to be this code lol

Anyway thanks for the suggestion :)

B0RU70 - March 25, 2018, 7:09 am

Good Program Thnx ^^ , I'm testing right away

archy-1 - March 26, 2018, 9:08 am

Thanks for the sharing , but unfortunately i came with 3 errors and can't really know how to fix them ? Someone would have any idea ! thx

Errors: (in french sorry)

Erreur BC30311 Impossible de convertir une valeur de type 'AsyncCompletedEventHandler' en 'UploadFileCompletedEventHandler'

I can't post images but here 2 screenshots of the errors

same f me

DeStilleGast - May 30, 2018, 2:20 am

Hey, I'm not sure, but I think that you forgot to replace some code

line 156, 290 and 420

```
Code client.Credentials = New NetworkCredential("root", "dreambox")
```

Rece - May 30, 2018, 9:04 pm

Looks great, thanks for sharing!

Washi - May 31, 2018, 7:19 am

Sample size of 1, a whopping 4 seconds speed up. I guess it's proven then. Program transfers files faster than FileZilla confirmed.

Spoiler ([Click to View](#))

You do realise that file transfers are highly dependent on the current network traffic, and therefore the time it takes to transfer one file might fluctuate right? ?

I mean even in the video it says that FileZilla downloading with around 5.9-6.0 MiB/s and your application is around 6.1MB/s. Now I don't know about you but I feel like that difference is pretty small. You're still using the same network link. If you did not limit FileZilla in up/down speed then it's virtually impossible to get significantly higher speeds.

IBlackMask - July 1, 2018, 3:20 am

omg good Program I'm testing right away
