Thread: [Quasar wont work](#)

corvettekid123 - February 6, 2018, 1:23 pm

I have used Quasar before and i had help setting it up. i believe im having trouble port forwarding but i dont know if that is the problem. But when i build the client and i test it out nothing happens. thanks

Sheeple - February 6, 2018, 1:26 pm

Check portforwarding issues by going to canyouseeme.org or portchecker.co , you'll need to be listening on the port for it to work.

Are you using the right IP. For example use your internal IP for devices on your network and a external IP for devices on other networks.

hacker18 - February 7, 2018, 6:12 am

you are skipping the password in connection maybe

hydrophobic - February 7, 2018, 8:00 am

Try your internal IP and see if it works.

corvettekid123 - February 10, 2018, 11:51 am

Im using the internal ip and the right port and it still does the same thing

PerfectStorm - February 10, 2018, 11:59 am

format c:

crash pc

if you cant setup a simple RAT then i dont think this business it's for you. you didnt even search but you made a new thread.

begining hacking , setup rat ..etc

This may seem rudimentary, but have you turned your PC off and then on again? If you haven't then you might be surprised :^)

SatanicBeefCakes - February 12, 2018, 12:21 am

My extensions aren't working either
