Thread: [Display group](#)

Canadian - February 9, 2018, 6:43 am

I noticed some ub3rs are able to display 3p1c or l33t as their primary or simply put ub3r as a secondary or whatever and I'm not sure how to do that. I went into options and settings, but I couldn't find l33t to display. I went to the upgrade page and it said I was still part of it so I'm not too sure where to go. Do I need to be apart of multiple groups(2+) before I get the option ?

Riyu - February 9, 2018, 6:46 am

Once you upgrade to Ub3r, you lose the L33t rank.

Windows - February 9, 2018, 6:46 am

You cant display L33T.. since when you bought UB3R it removed L33T and changed the group to UB3R.

Kinda wish you could display L33T.

Once you upgrade to Ub3r you are removed from the L33t user group which is why it is no longer visible on your profile. Ub3r is a complete replacement for L33t. If you ever join a custom user group or purchase 3p1c then you will be able to display those instead of Ub3r. You can change your display group from the bottom of this page <https://hackforums.net/usercp.php?action=usergroups>
