Thread: [\[HELP\]\[02-15-2018\] Installing Kali on Ubuntu 17.10](#)

Poll Element - February 12, 2018, 12:55 pm

Hey everyone,

I'm pretty frustrated at the moment because I've watch several youtube videos on this topic and I keep getting the same result. I've read other articles and they all result to me not being able to run "katoolin" maybe someone can help me.

In the video "HOW TO INSTALL KALI LINUX TOOLS ON UBUNTU 2017" by "TheLifeHack" i've done everything up to 3:42 - 9:52 marker.

I can't post pictures due to the 50 post requirement

website -> just remove the "-"

Anyone have a solution or know the problem?

What are you exactly stuck at? What was the last command you attempted to do and what error message did you receive?

Poll Element - February 12, 2018, 1:07 pm

"The error I'm getting is "sudo: unable to execute /usr/bin/katoolin: No such file or directory"

Cannot Compute - February 12, 2018, 1:10 pm

Did you copy the file over using "cp katoolin/katoolin.py /usr/bin/katoolin"

(Feb 12, 2018 02:10 PM)Cannot Compute Wrote: [\[CITE\]](#) Did you copy the file over using "cp katoolin/katoolin.py /usr/bin/katoolin" Not sure what you mean, but I will remove it and try to that method again. Though, when I check in FILE widget it shows both the file "katoolin" and "Katoolin". I'm going to assume that the one with the padlock water mark is a zip file? Some do shed some light on this if they have experience.
