Package 3 (180 days) --->>> [Start contract!](#) Package 4 (Lifetime) ---->>> [Start contract!](#) I am giving a fair warning to all my customers....

STOP posting your "problems" here just because you don't know what the fuck you are doing or I will start banning licenses no matter the package you own.

Don't say I didn't warn you.

Important update!

From now on you won't be able to crypt hawkeye, nanocore, orcus, quasar, njrat and all the other outdated applications.

It remains to my discretion which are those! Please ask before BEFORE purchasing if your rat, logger, etc can be crypted!

This crypter is disabling Windows Defender permanently without the user consent.

I am NOT obliged in any way to teach you how to use it!!!

Hello.

Because of some issues from NETGuard obfuscator (debugger function) currently DataProtector stays active in task manager searching and protecting it self from debuggers in a constant loop. I am really sorry about this, there were NO news about this bug from the obfuscator creator.

If by any chance you ran the old/regular build please open task manager and search for all DataProtector instances and kill them.

Please redownload the new build and update the old installation.(same link / same password)

Thank you for understanding.

Well it says in the title that it will bypass 99% of av's runtime and if you go back one page you can see that he uploads scans of the stubs.

undeadlegend - March 12, 2018, 12:04 am

Hi Guys,

I think CheckVirusMate is Distributing Files to Kaspersky AV!!!

I bought DataProtector with the integrated CheckVirusMate scanner. I crypted a new file and did not spread it nowehre. The port was not used by me anywhere else and the password of the rat was also new. After the scan virtual machines in russia (where kaspersky is made) came up in my rat. A few hours later my stub got detected by Kaspersky.

First Scan:

[img]<https://xx/www2.pic-upload.de/img/34984628/1.png>[/img]

Second Scan:

[img]<https://xx/www2.pic-upload.de/img/34984639/hfkasperskythread.png>[/img]

EDIT: Today again the same thing I created completely new stubs with new ports. The first scan was FUD

Unfortunately I forgot to take a screenshot of it thats why I have only the second scan where it is not FUD anymore. Some hours later it gets detected again by Kaspersky:

[img]<https://xx/www2.pic-upload.de/img/34984642/img.png>[/img]

And no I have no antivirus software on my computer and all other options for detection are excluded except that the site is a scam and that they are distributing files.

PS: As I am a new member I cannot post pictures directly just remove the XX

I'm pretty sure that's true, first time i Crypted my stub it got detected by kaspersky and i got new clients from russia that disconnected fast. Viruscheckmate distributes to kaspersky.

n0\$f3ratu\$, Hello i have been using data protector for over a month now and there seems to be a issue with the binder. Sometimes it executes the program you bind to it and most of the time not.

For this kind of "issues" please contact me in private, however this time I will reply here.

If you binded with the same name multiple times is NOT going to work. (Is going to work only one time)

Every time you bind a file make sure you rename it.

That way it will work every time.

Also remember this is one time binder.(Your file will run one time, then never again) ?

It is not working with IM5, when you use a binder. Without a binder the crypter just works with IM5 with .NET 2.0 and 3.5.
Thats sad, because it is a good crypter.. but not for user who want to work with IM5 4.0 or IM5 with binder.

As I told you in pm this crypter doesn't work with apps running under net 4.0

If is too hard for you to understand that then is NOT my fault.

The binder is working more then perfect.

For posting this shit in my thread (because you are dumb) expect a ban real soon.

Are you serious? Should I puplish the pms? You told me nothing about 4.0 - I asked you, but dind't get an answer so far. So don't lie.

And it was no accusation. It was just a feedback. Maybe helpful for users who want to crypt IM5 with 4.0. So don't feel offended, wtf.

And I told you the binder is not working with IM5, and you answer is, that all is working perfect... wow. This support is amazing.

I believe you didn't even try it with IM5 and a binded file.

I tested more then 10 times with .net 2.0 and 3.5 and different binded files. Nothing works.

And stop threaten with a ban, this is to unprofessionell. This was just a honsest feedback from me. So don't cry.

2. Fix showing the fake messagebox.

(Before when using fake messagebox the file wouldn't run properly.)

3. Fixed error C0x0000018 which occurred on startup.

4. Fixed MANY other small bugs.
5. Fixed shortcut in terms that from now on it will be only one shortcut and not more.

For future I want to fix startup shortcut (when a new shortcut is added even if has the same name as a previous shortcut it will point to the new app and not to the old one).

Meanwhile until i finish with the documentation if you are using a different path for your startup then the old one use a different name.

Maybe for you this doesn't seem much but I worked on this for almost 3 days taking each line and fix it.

Without startup "Installation" it works great, when I tried to add it to startup gets detection (IDP.ALEXA.51 or IDP.ARES.Generic).

File runs fine, but after delay (25seconds) detect my stub hidden in Install Directory with Filename configured at "Installation" on DP.

What I'm doing wrong?

Quote:Hello.

When you crypt if you get the error after "Obfuscation step 1 finished.."

then it means your PC username is from two words (John Smith for example)

To fix that error you must creat a new user account from only one word ("JohnSmith")

After you create the new user account navigate to Program Files or Program File (x86) if you are on
x64 system

and copy the folder DataPro to your desktop or a different location.

Use the crypter from the new location.

At this point you should be good to go.

Good luck everyone and thank you for being so nice and patients customers.

Netwire is native, so it should really work with any settings but i'd recommend you only have connection on in netwire and use DP for any other functions you'd like.

EDIT: someone brought to my attention that DP's startup apparently doesn't work with Netwire.

Well like ALWAYS I was right and he can confirm it.

I tested and showed him he was wrong like all the others.

Everything on the crypter is working as it should.

I am tired to tell you (all of you who have "problems") the problems you are facing doesn't come from the crypter, but from the one who is using it.

Use another browser or clean your current one (cache, cookies, flush your dns).

If you do that then you will be able to make the payment.

Cheers so best to update the hosts every 2 days or so to remain undetected without losses? Guess it all depends on stub updates from the coder. I will most probably buy this once Cryptos go up in price get most for what currencies I have might be a month or so but I like to pre plan :)

If you get MSE or WD then just don't use anti tamper.
If you get more detection then is from you.

Buy a certificate and you will bypass it, but then again all your info will be out there just for the taking.

Also you should know ... pretty much nobody in this world has wd activated except for users like you who are using malware.

The rest have regular av which is disabling wd automatically.

Now that you stated your opinion feel free to move along.

Btw this "shit" is running for years so if what you said would have been true I should have been out of business long ago.

Is true because of the heavy encryption sometimes you get an error about not being able to read the resources, but that is the reason I am telling everyone to test before installing to other computers they own.

I have been using this Crypter for over a month now. And I must admit it's giving me great FUD results. For those of you wondering if it bypasses Windows Defender, Yes it does I have personally tested it multiple times, It completely and quite easily bypasses Windows Defender.

These are my scan results:

<https://scanmybin.net/result/81e6025e5178250b71051c1a4d14877ec4847ea42ee440cb754c6e2badb1a30a>

<https://antiscan.me/images/result/6a4ecf1b82641970171b29d610105c7a.png>

<https://spyralscanner.net/result.php?id=iYSgMyDVyU>

It also easily bypasses Avast Behavior Shield. The Trick is to use an updated/maintained RAT.

These are my experiences with the crypter. n0\$f3ratu\$ would be able to further elaborate on this.

Thanx and Regards.

I previously used this program and was very pleased. This is the best crypter
But I do not know. Does this product work with Orcus RAT?

That is from you.

Recrypt and change your assembly info.

Also If you are using an icon wither change it either edit it using icofx.

CLIM - October 24, 2018, 3:09 am

You should replace the icon and file information and you will get a FUD.

I really don't know what happened here. Feels like some unfortunate misunderstanding.

I swear there was no reply from you whatsoever at my side and I have no idea what email problems occurred to help this situation happen as I never received any email or reply from you somehow.

To be honest, I realized money could be gone and nothing to do at your side, as for me its not about the money - just basic human respect. But then I see my account gets banned and no replies from you whatever for long time.

I tried to be as fair as I can from my side realizing wrong things and I'm sorry for this unfortunate situation as now I see you obviously never intended to scam me.

I don't want a refund, I'd be happy to use your service like I did for 2 years.

Can crypt NanoCre,

about Origin keylogger I didn't test but if your keylogger is coded professionally (I mean is not shit like some other keyloggers) then Can crypt.

Honestly I wouldn't have mind if what you accused me (my product) was true, but sure it isn't and there are some basic detections which nobody, no matter what crypter they use will bypass them (like cloud/reputation, ect)

Second you obviously don't know how to crypt or even how to fucking name your file.

Forth you are banned and will stay like this.

It is flawless. I was surprised to see how constant updates are and it is amazing compared to any other crypter on the market. I love the fact that it has every feature you may need all in one tool, along with being a crypter. For example the signature stealer, extension spoofer and all other functions work flawlessly. The scanner is fast, accurate and I would suggest to any member interested in purchasing this, do it!

Thank you for posting all this.

I did my best for you and you started to curse me. (therefore your posts got deleted)

I even crypted and tested your file in my vm where it worked perfectly.

You also tested (the file I crypted) on your system and worked great.

The only issued you had were the detections because I haven't used any kind of assembly.

Those detections could've been solved very easy by using assembly info and another decrypt.

Btw I wasn't rude with you in any way through our entire conversation.

From now on if you have anything against me or my product I advise you to use a separate thread or you will probably get banned.

Why does it say that you won't be able to use it with Quasar because it is not maintained/poorly coded? The last update to Quasar was a month ago and its considered the best free RAT to a lot of members.

hello, i am really not happy with my purchase. i use with NETWIRE and many other. after crypting.

each time i run the crypted file, antivirus catches it(avast) all the time. if i scan without running, it doesn't catch it. but once i run the file, boom, deleted.

is there any fix?

Does Dataprotector bypass kis on runtime? Dyncheck result is shit. You can got FUD on dyncheck and got detected when you run your crypted file on a real PC with kis installed on it.

DataProtector on the other hand...Is a piece of art!

Its a complete package to get a functional sturdy and fudge application

I just dont have a single bad thing to say about the Tool nor Support, tried over 12 different RTools and with little tinkering i was golden on every single one.

your crypter still remain one of the best on HF,

Fast update

Quick customer support (even if you might sound pain in the as* sometimes)

And Always having only 1 detection (which is good as ESET has the shit engine to bypass sometimes)

But you stop to support Orcus, njrat, quasar and someother only available R A T

Imminent has pack off yet you still support it and says others do not have support anymore, can you look into this maybe u should re-enable users to crypt this available R A T as there is no other manageable crypter out there than yours and i for one have been so fond of it.

myxhacka - October 15, 2019, 8:45 am

I'm not giving any credit to N0\$, but truth be told, you need to come down and obey simple instruction .

I have had issues testing stub on those windows, very stupid thing even after you disable the Windows Defender, there is a apart that is always there running, I find the name, Anti malware something.

N0\$ has a fast support, people have also judged me like Him.

People will complain about things and when you get there to find out they are not doing things right. I was telling someone I helped to buy a crypt last time, to buy rdp and install it, he was fighting, I gently sent Him the details and asked Him to install where ever He wants, because for me, I wasn't ready to make any troubleshooting.

Someone bought DP and was explaining to me something today, after I had told Him to install it on RDP.

<https://framapic.org/HPQk6ecjR9Mc/2DeCHVi3ZZ3n.png>

And hey N0\$, telling the guy He is a Nigerian, sounds rude like you are saying everyone from that country is a noob.

If possible kindly rephrase .

I just did some tests with various rats.

Warzone = DIDN'T bypass avast
= DIDN'T bypass avast
NetWire = DIDN'T bypass avast
AsyncRAT = BYPASS AVAST

Spoiler [\(Click to View\)](#)

From what I could notice is that all rats that didn't bypass are probably using old outdated or unmaintained runpe, while AsyncRat is not using any.
That makes it for the moment the best free rat.
I did this tests for the past 24 hours!
Maybe I am wrong in which case I apologize, but I doubt it.

I just wanted to share this with all of you.

Important update!

This is just the first stage.

From now on you won't be able to crypt hawkeye, nanocore, orcus, quasar and njrat!

Next week more outdated not maintained or poorly coded apps will be added to the list!

This crypter is disabling Windows Defender permanently without the use consent.

How do you detect a program that is not maintained? Is it signature based?

I just want to know if my custom applications will be detected as "outdated not maintained or poorly coded".

Tenner12 - March 1, 2020, 7:43 am

Hello,

So if your crypter is net-dependent, what net-framework does a crypted rat need on the computer on which it should run?

4.0? Or 3.0? (Does it run on windows 7 or maybe even xp?)

Deathy - April 2, 2020, 12:33 pm

I purchased this but after submitting my order details via email, I was advised they would be refunding me, and told to "Find something else".

Don't exactly understand this but nonetheless, I respect n0\$f3ratu\$'s decision.

Sucks as this appears to be the only decent crypter on HF.

From my sincerest opinion, this guy is a great coder as I have read through negative and positive comments from past. From my careful observation I say that he is rude, pompous and full of himself. He doesn't really care about his customers or how they feel when he talks to them; he is so verbally abusive. I intended to buy but after reading his response sounding so rude, egocentric and too proud, I decided not to buy anymore. I rather stick with my current crypter. Even if you are the best coder in the whole world, you still got to show some respect to your customers. I see your downfall in the nearest future, you are really getting everyone pissed off. You think you need no one but you need everyone.

This guy talks like a child. Is he a teenage coder? Just imagine how he talks to people. Some people here are your dad's age mates. You should get that into your little thick skull. Show some respect.

Hello,

why can't crypt nanocore, orcus, quasar, njrat etc?

That's what a crypter is meant for, on a hacking forum.

If a crypter can't bypass behaviour detection, it makes no sense at all. Unless you're selling shared stubs.

I strongly recommend everyone using Mass Logger over any other logger.
It has the best runtime possible.

The Runtime Scans are Amazing, Both with and without Net. No Secret Async is a Fantastically Coded Piece of Software. It Gives very Good Results Scantime and Runtime when Crypted.

And Data Protector is one of the Best Crypters out there is the Market, I have used it in the Past. Have Fond memories of it.

I would Highly recommend Data Protector to anyone looking for a Crypter.

I Agree with the Statement Above. Would Highly recommend Mass Logger By Nyan Cat over any other Logger. A Great Product By a very Trusted and Reputable member of HF.

And I would recommend Data Protector Crypter to go with it.

Thank you for your "recommendation"... however I find it strange that you waited until your license was done to post this.

Also if you did this just because I didn't wanted to help you with your malware then you really are mentally retarded.

When I told you on discord you are an idiot for using your direct IP on your rat you got upset for calling you like that.

Probably that is what made you to post this!

Anyway good luck and have fun with your next crypter... (which I bet it will be better then mine).

man most of us have little or basic knowledge about this stuffs and we keep learning everyday. we are no coders....some of us do something based on the advice we receive from people who are coders too , the advice which might conflict with that of another coder like in my case.Above all you have no right to insult your customer when he has not insulted you or broken any of your rules.you might even be insulting someone old enough to be your Dad just because you are hiding under a keyboard.anyone who has a social problem should fix himself and not go about insulting people.We all have our field where we are gurus.....no i do not insult anyone or take it from anyone...if i have the oppurnity i will break the person's arm just to remind him that his parents did a poor parenting job or that he simply choose to be a stupid child.

3. All you managed to do by posting this BS post of yours is to get -5 and make a fool of your self.

2. Him threatening me with purchasing another crypter (like I would give a shit! :):):))

3. Him coming back with a new question after threatening me... lol!
