Thread: [please check this handshake for me \(ligit\)](#)

mysterdee888 - February 12, 2018, 3:24 pm

Please check this valid handshake, i cant understand where im going wrong, its a 100% capture of all 4 eapol - it includes managment packets also, but if i just capture the data packets aircrack refuses to acknowledge it full stop..

with managment packets it accepts it but does not find the handshake..

To make this interesting, i test anybody to crack the password... its a simple one but i doubt anybody will crack it...

But if anybody can see where this .CAP file is going wrong please give advice, as its driving me nuts, its a complete handshake...

iv tried norrowing the file down to just the necessary 4 eapol but thats not worked...

iv included the aircrack test .cap file also...

that works onm air crack..

i dont see where im going wrong..

any advice is greatfully needed.

thank you.

filedropper com / withhands1 --- my capture

filedropper com / wpa2eapol --- aircrack test capture

add the . and w w w

Also, am i supposed to filter out the specific handshakes or am i able to pass the whole capture into aircrack...

im using commview to capture, just my own tab and mobile.

And aircrack gui to crack the .cap /wireshark file.
