Thread: [Coinbase launches : Coinbase Commerce](#)

SIM-1589588 - February 17, 2018, 9:35 am

What is Coinbase Commerce?

Coinbase Commerce is a new service that enables merchants to accept multiple cryptocurrencies directly into a user-controlled wallet. Our mission at Coinbase is to create an open financial system, so we've designed this solution to serve merchants worldwide. Unlike previous merchant products we've offered, Coinbase Commerce is not a hosted service, so merchants have full control of their own digital currency.

Coinbase Commerce can be directly integrated into a merchant's checkout flow or added as a payment option on an e-commerce platform. With just an email address and a phone, merchants can sign up and begin accepting payments in Bitcoin, Bitcoin Cash, Ethereum and Litecoin.

Wow, this is really interesting. I might look into using this in the future.

Omniscient - February 17, 2018, 6:31 pm

I really don't think members should trust Coinbase. If Coinbase is really wanting to do this they can release the code for anyone to setup on their own servers.

Cød3ing - February 17, 2018, 11:40 pm

they shat themselves with the whole visa incident, gg no re

FatStacks - February 17, 2018, 11:44 pm

Yea I would not trust coinbase. They are really nice and convenient, but if you are a huge merchant receiving and making lots of money, take the time/funds to develop or use a different payment method
