Once this supports Swedish restaurants let me know.

Looks good though, good luck!

Currently we're only offering US brands due to the greater customer potential, but we'll consider it once we get up and running for full!

Yes, if you offered GCs for worldwide (or at least popular countries) I'm sure you would do a lot better. :)

I'll look into it. Anyhow, know any way I could improve my site to obtain more US customers?

Concept is certainly nice. Only two problems:

1. The domain is short but awful. Buy a premium TLD.
2. Where's HTTPS? It's 2018, not 2010. No excuse not to use HTTPS, it looks much better too.

also looks like a grate service and i can't wait to see if you start selling to Australians :p

good luck with sales

Thanks for your feedback, will certainly make it force the HTTPS. I really enjoy the current name, but perhaps you've got any recommendation for another domain name?

Hi,

I've updated some visuals on the site, let me know what you all think.

Seems like a pretty cool idea. Design could use some improvement though.

Thank you for your feedback, anything specific in mind or just generally?

Website is greatly improved, and we've added some more brands - as well as 50+ more coming in shortly. Are there anything you guys think I should change/improve about the website further?

Those blends of green are just.. bad.

1. I thought you were going to force HTTPS?
2. HTTPS isn't secure because you're loading images from a non-secure URL. If you have CF use opportunistic HTTPS rewrites.

Service is available for the US only as of now, but stay tuned as we'll implement EU countries as well!

Your domain is worth a lot.

How much did you get it for?

Around \$50.00 USD or so, what do you think it's worth?

The idea of the concept is quite nice, but you should really get a new webdesign. It looks awful imo.
