Website just launched in open beta, working on a new design now.

Any feedback is welcome!

I really like your domain name, definitely brandable. I think your homepage should have more links for visitors to browse and more info about the company and why I should sign up. I don't get much info - such as the kind of cryptocurrencies you reward.

Best of luck with your site, and I'll be keeping an eye out! :)

The domain is very nice. Not sure how you scored that, would've thought it would be taken. As for the design, it just looks like a default bootstrap template. Definately a lot of work ahead of you to make it look better.

As mentioned above, this domain is real nice. This has alot of potential if the right type of work is put into it.

Goodluck man!

Decent design. Better concept. Feel free to promote your site on <https://www.goalzmedia.com/>

Looks cool, but you need to improve your security a bit (for instance, try and use coupon ZQZAMAH3S1 --dont use on your real/main account--).

This website has been reviewed by Unity

Couple of security issues found, resulting in being able to get unlimited 'points'/money and unlimited PTC Ads credits. Messaged you the details.

Everything was fixed with latest update. Thank you so much for pointing this out!

The photos look a bit janky, but other than that I like the domain and UI.

I'd change those crypto currency logos to SVG icons instead of having them on an image

Thank you for the feedback.

I see you used the different existing platforms for this new version?

They have some small things, like being able to see everyones point balance:

https://www.offertoro.com/my_earnings/show?pub_id=13214&app_id=4864&user_id=admin

but overall it seems to have a lot better security.

The design looks good, but there's way too many inconsistencies making it look very unprofessional.

Thank you everyone for the feedback.
