Warpig's Advanced Arbitrage Guide | One-on-One Learning | Call/Screenshare Lessons

Hello everyone, today I've come around to sorting live Skype voice/screenshare calls dedicated to teaching anyone and everyone interested in learning crypto-based arbitrage to an advanced degree. What influenced me to offer this? I have had quite a few people asking in thread and via pm how I trade to make my full-time living and afford things.

[Reference Thread \(click me\)](#)

By the end of the lesson(s) you will be able to:

- Confidently spot trades that can be taken
- Learn what trades will/won't be volatile mid-trade
- Know which trades will offer decent profit margins
- Learn how to calculate fees fast and efficiently
- Learn to trade on both the BTC/ETH markets

Why should you learn arbitrage?

It's simple, and an efficient way to make money fast no matter your capital. I would like to mention the more capital you have to begin with, the more you will make per trade on profit margins. The general trade will make you 1.5%-4% of your capital used during the trade. Although it may not sound like much, you need to take into account you can make a full days worth of wage from a regular job in less than an hour fairly easily within a trade or two depending on once again; you capital.

Pricing

First sale: \$95

Second sale: \$145

Third sale: \$195

Fourth sale: \$245

In return, there will be unlimited one-on-one live voice call/screenshare sessions where I will firstly teach you, and then can further assist with any questions you want to ask via another call, or simply via message (whatever you prefer). Unlike other teachers I offer unlimited support. I am online from 12pm-3am based off the time shown on HF every single day.

Have a question?

Simply pm me, I'll answer them as soon as possible!

effectively?

For effective trade as little as \$500-\$600 will show a trend of decent profit.

If you can show some trade earnings I'd be super interested.
