Thread: [Simple way to get AdFly clicks, need vics.](#)

Barinade - July 31, 2010, 7:23 pm

Here's a simple one. I've been using it for a while and it's going good.

All you have to do is make a batch file with this inside

Code @ECHO OFF

:top

explorer ADFLYLINK

timeout 10800

goto topThen send and run hidden on your servers.

Timeout 10800 is 3 hours.

ThemisBro - July 31, 2010, 7:35 pm

i do not understand this... can you put more then 1 link in it? and how exactly do i make a batch file :(im a noob when it comes to computers

Unkraft - July 31, 2010, 7:40 pm

i was banned 4 doing this.

Halo: Reach - QnA - July 31, 2010, 7:41 pm

I got suspended from adf.ly for running a bot that clicked the link for me in about a day.. I don't recommend this if you're serious about adf.ly.

WhoTFCares - July 31, 2010, 7:43 pm

Yeah, I was banned using bot too.

@Ciaron

Open notepad, Copy Code @ECHO OFF

:top

explorer ADFLYLINK

timeout 10800

goto top

and save as .bat

But if you are serious about earning with adfly don't use it.

v3xr - July 31, 2010, 7:52 pm

its a direct link and clicked over and over at a constant rate so it's obvious to them that it's a bot. You need a routine to wait a random amount of time, and a couple web pages on a free host that has an iframe with the link in it, have it visit all the pages. Example:

Code @echo off

:settings

set /a r1= %random%/100

set /a r2= %random%/100

set /a r3= %random%/100

set /a r4= %random%/100

explorer http://www.watever.webs.com/external-links.php

```
timeout %random%
explorer http://www.watever.webs.com/home.php
timeout %random%
explorer http://www.watever.webs.com/downloads.php
timeout %random%
explorer http://www.watever.webs.com/home.php
exit
```

The random variable generates a random number of a certain length. Mess with it in cmd if you wanna learn more, unless you already know ?

DKKEwil - July 31, 2010, 7:56 pm

Ciar:

I don't think you can put another link in it, but you can always make more .Bat files with other links

But for you Question about batch:

Spoiler ([Click to View](#))

[The First Batch Guide that comes up, when you search: "Learn Batch"](#)

&

[A Goole search of: "Learn Batch"](#)

&

[A search on HF of: "Batch TuT"](#)

Hope That Helped

~DKKEwil

yeah you can put in more than 1 link easily, see my code above ;)

brunoais - May 20, 2011, 2:20 pm

Is there a way to do something like that but using an iframe in my website?

Is there a way of doing something like this in a browser addon using XMLHttpRequest?

ahmedronaldo - May 22, 2011, 4:32 am

i didnt understand man can you please make it more easier

brunoais - May 22, 2011, 4:40 am

Is there a way to have adfly working in an iframe and not allowing it to reload the page?
