Thread: [Convert something loaded from website to an int and multiply](#)

Konstantinos - March 1, 2018, 1:03 pm

So, I want to put that in a variable (var total_rece_btc), the load part, where it is being converted to an INT and multiplied by 0.00000001

```
Code $('#total_received_btc').load('https://blockchain.info/q/addressbalance/' +  
'1EzwoHtiXB4iFwedPr49iywjZn2nnekhoj' + '?confirmations=0');  
Thanks in advance ?
```

Does that page return a string or something?

Do:

```
Code parseInt(total_rece_btc) * 0.000001
```

I'm not sure why you're using .load to get the variable. Do this instead:

```
Code $.get('https://blockchain.info/q/addressbalance/' + '1EzwoHtiXB4iFwedPr49iywjZn2nnekhoj' +  
'?confirmations=0', function(d) {  
    $('#total_received_btc').text(parseInt(d) * 0.00000001);  
});Side note: So I don't get chastised, you should probably throw a check to make sure the page  
returns a parsable string/int. Otherwise the text for #total_received_btc will end up being something  
like "undefined" or "not a int" or like "false" and that's obviously a problem for you and your users.
```

Do:

```
Code parseInt (total_rece_btc) * 0.000001
```

Tried this thing, wont work:

```
Code var total_received_btc = parseInt(load('https://blockchain.info/q/addressbalance/' +  
'1EzwoHtiXB4iFwedPr49iywjZn2nnekhoj' + '?confirmations=0')) * 0.000001;  
    $('#total_received_btc').html(total_received_btc);
```

    $('#total_received_btc').html(total_received_btc);What even are you doing. I just told you  
how to do it.
```
