Thread: [Smoke Loader setup help?](#)

tippitytopkek - March 4, 2018, 3:27 pm

Hello.

I got smoke loader, but I am having trouble setting it up. Apparently, it's not as simple to set it up as it is with others.

Can anyone give me a quick guide or some guidance? I'd appreciate it.

P4r4517 - March 4, 2018, 5:02 pm

Can you tell us at what point have you stuck? Its just as simple as setting up a normal website.

ShortVRX - March 4, 2018, 5:19 pm

I've set it up a few times, what exactly seems to be the problem?

Smile? - March 4, 2018, 5:26 pm

Check my signature , if you are looking for setup-mentoring.

speedcluster - March 5, 2018, 1:56 pm

there you can find out some Members who has setup service,
but if you want it for mining try to see my signature with bots you have low H/s

I'm taking you're using the cracked copy, otherwise you could contact Smoke and he'll lend a hand.

I got smoke loader, but I am having trouble setting it up. Apparently, it's not as simple to set it up as it is with others.

Can anyone give me a quick guide or some guidance? I'd appreciate it.

- Upload Smoke panel on your Host (Cpanel)
- Extract file and name it "Panel"(or whatever u want)
- Give 777 Perm on folder INC/UPLOAD/FILES
- Go in your SQL db and create New one , set user and password DB
- Open in INC/cfg.php and edit data as you just done in SQL (DB name,user,pass) + Panel user/pass
- Enter any ENC/DEC key like 0x123ABC and save it
- Run install.php " http://yourdomain/Panel/install.php

You IN) edit file name in Cfg and change name of file in server

Build the exe according your Path ! " http://yourdomain/Panel/index.php

Enjoy ;)
