Thread: [bootstrap align image to the right and make it static](#)

Kjetil - March 5, 2018, 9:59 am

<https://prnt.sc/in85ez>

this is how it should look

i am using bootstrap and laravel and i am very newbie with webdesign

so whats the problem? i am currently using an white image in the middle to hold the image to the right floating right because it will move to the center without it

i want to fill up the middle with content but its impossible because the image on the right will move

here is my code

PHP Code

```
<?php
@section('content')

@for($i = 0; $i < 50; $i++)
<div class="container-fluid">
<div class="row">
@if($i % 2 == 1)
<div class="col-md-4"></div>
<div class="col-md-4"></div>
<div class="col-md-4"></div>
@else
<div class="col-md-4"></div>
<div class="col-md-4"></div>
<div class="col-md-4"></div>
@endif

</div>
</div>
@endfor

@endsection
```

? ? ? ?

Why are you putting md-4 for that tiny image?

If it were me I would do it this way:

```
Code <div class="container-fluid">
<div class="row">
<div class="col-md-2"></div>
<div class="col-md-8"><h1>Content</h1></div>
<div class="col-md-2"></div>
</div>
```

Or if you do want the center to have smaller just change the col-md-8 and the last col-md-2 to:

```
Code <div class="col-md-offset-2 col-md-4">..</div>
<div class="col-md-offset-2 col-md-2">..</div>
```

Maybe it's not filling the content with anything because there isn't any content inside the middle div?
