This guide is so easy you're gonna be shaking in your space boots because its so easy to use.

Requirements:

amazon.com

seller account

valid bank account

valid credit card

Step 1: Acquire cheap amazon gift cards for Paypal or BTC (BTC Has better exchange rates). You can also check reddit too. You want to buy one that is 80% discount around there or 70%.

Step 2: Create a seller account on amazon.com, you will require a valid bank and credit card to do this.

Step 3: Once your account is created, list your item on Amazon (nonexistent item). You will need to list your item to match the exact value of the gift card you have also make the listing so that it doesn't show up to the public.

Step 4: Once your item is listed, you will need to use the Amazon account of a friend, or a second Amazon account of your own, to buy your own product using the gift card you bought earlier. For this step it is crucial that you do not link your seller account to your other account, this is why its easier to use a friend.

Step 5: When you get the payment by gift card from yourself or your friend, fulfill the purchase as you usually would and attach any random shipping number you can find.

On a \$140 investment in gift cards you will now have made \$60. If you invest in as much as \$600 worth of gift cards you will now have \$400.

This process is easy and can be repeated as many times as you like.

I don't understand.

You made all these so that you can redeem your own cards ???

Why don't you exchange it with cash ?

And there is no such a thing as 70% discount on giftcard.

Please tell me where to find it.

People usually sell those on here for 70-80 of BTC Price or sometimes paypal
You pay 70 dollars for 100 GC buy your own product from Amazon for 100
you profit 30

Do this until you can increase your profit to 1,000
30% of that is a good chunk of change
It's a free guide I am way passed that and make a ton more daily than that at this point.
I dont use this guide but its something for newbies to get going.

WOW! this method seems very viable and fool proof. And I don't see anything ilegal about it.

It's just hacking the system. Well thought Bro! amazing!
