Thread: [Topher Crypter Help](#)

QuantumDev - March 8, 2018, 8:29 am

I tried using Topher Crypter with the following RATs and none of them seem to work, and just return errors:

- 1.4.1.0 Quasar Golden Edition
- Babylon RAT
- njRAT v0.7d

Is there something I might be doing wrong?
Thanks in advance.

Did you choose ".NET Support" in "Settings" tab ?

Yes, I have.

Tried playing around with different setting combinations for both the crypter and the RAT and nothing works.

EDIT: For Quasar, a message box pops up that says "MPRESS: File is invalid".

are you sure the files working without Crypting ?

never got any problems by using xTopher by any type of RAT net & native

mfg may dont use an free one

Try to build RAT without packing with MPRESS.

I think MPRESS is just default for Topher. There's no way to disable it.
