Thread: [Error when viewing threads?](#)

Enzio - March 13, 2018, 2:22 pm

Basically, when I go on "View your posts", I can see that there are new posts on certain threads but when I click the thread, I can't see anything that follows my post. Is this happening to anyone else?

Update 9/5: it's still happening. I can't see any posts that follow mine whether I'm being quoted or not.

Is this happening to anyone else?

Charger - March 13, 2018, 2:23 pm

The thread might have moved to somewhere you don't have access to.

What's the thread/post?

Enzio - March 13, 2018, 2:24 pm

It says that the most recent post on this thread was 11 minutes ago by the user "Xeriant" but I can't see it. It's been happening since yesterday.

Elitas - March 13, 2018, 2:25 pm

This is a common bug which occurs with particularly large threads. Not sure if this is what's happening in your case, will need more information. I do see you have a thread with 1,000+ replies though.

I see it just fine.

It's an image with some Shopify statistics. Maybe you have extensions/user scripts that are glitched out or something?

Strange.

See, now that you just linked his post I can see it but if I click on the thread by myself, his post isn't there ?

Have you tried checking page 5? <https://hackforums.net/showthread.php?tid=5806863&page=5>

Yeah like I said, if I click on my post, there's no page 5 nor is there any posts following mine.

However, you can see it and just linked his post so now by clicking the link I can see it but if I go on my "view your post" and visit the thread, the post or the 5th page aren't there.

When searching your threads, I don't see that thread listed AT ALL.

Very weird, maybe the glitch has something to do with the way that new pages are created on threads.

EDIT: I noticed this actually isn't your thread. Where are you searching for it?

Update.... After clicking your link that directs to the 5th page of the thread, I am now able to see the page and the user's post.

I don't know what kind of bug this is but you might the child of the prophecy.

I'm almost certain now that it's a MyBB cache issue. I could be wrong (likely am), but that's the only thing which makes sense to me. Hopefully Omni will see this. Time to fire up my own MyBB copy, run a plugin to generate random posts and start testing. ?

Hopefully he does yeah :)

Omniscient - March 13, 2018, 4:37 pm

It's a cache issue but almost certainly with MySQL and the query cache. Sometimes it happens and you just have to deal with it.

Elitas - March 13, 2018, 4:40 pm

But him making a simple GET request to the post in question, has made the 5th page link now show.

I assume that since it was showing just fine for everyone else - That it could be an issue with the browser too. What makes you so sure it's a MySQL issue?

I'm just sure it's not a MyBB issue. So that just leaves MySQL caching or Cloudflare but I doubt it's CF.

Enzio - May 9, 2018, 11:06 am

Update 9/5: it's still happening. I can't see any posts that follow mine whether I'm being quoted or not.

Is this happening to anyone else?

Omniscient - May 9, 2018, 12:48 pm

Do you need me to repeat myself?
