Thread: [I can't link Python interpreter to JetBrains IDE?](#)

Crypt - March 13, 2018, 10:36 pm

I downloaded the latest version of Python, however, when I go to select the interpreter under the settings in JetBrains it can't be found? I also re-downloaded Python, however, that did nothing.

Here is an image if you want to see what I'm looking at.

Spoiler ([Click to View](#))

Also, any tips for someone that's new to the language would be appreciated. ?

I did install it which is the part that doesn't make sense.

HFDone - March 14, 2018, 1:33 pm

did you add the path environment variable

Reinstall python and check the box below

or follow instructions to do it manually

<https://superuser.com/questions/143119/how-do-i-add-python-to-the-windows-path>

Did what you guys said, however, still I can't select an interpreter in the IDE and run any code.

HFDone - March 14, 2018, 2:17 pm

then its problem with JetBrains uninstall it reboot and install it again

Reinstalled it and while it was setting up it gave me this error

Spoiler [\(Click to View\)](#)

Also, it looks like I have a 64bit and 32 bit installed of Python if that matters?

Figured it out, thanks for the help though.
