Thread: [Simulation of Collisions in 2D \[Mass, Friction and Velocity\]](#)

Barret - March 14, 2018, 10:40 am

[img]http://d2vlcm61l7u1fs.cloudfront.net/media%2F690%2F690b5483-0775-4313-94ee-bb8b17cc7dbf%2Fphp3JxIKJ.png[/img]

Following example demonstrates the simulation of collision detection of two or more objects and how they react on impact using mass, friction and velocity vectors.

You really do have a weird desire for strange projects. It's a refreshing change. I'm just about to look at your code. Just one thing. Learn whata space bar is mate. Stacked lines of code with no xml documentation :(

There are lots of coding inconsistencies in your code. The way you write changes. A programmer should only have the One way he/she actually writes. As a whole, there is not much we can say here as it's just a class with no insight. Your naming can do with alot of work. be more use seeing a working example to see not class as is.

Whats with all your parentheses?

EdwardSn0wdent - March 14, 2018, 1:25 pm

Words as above. keep typing word's i am not meant to mean. It's a side effect of the drugs i am on. Last 4 weeks in the hospital, 2 and a half you will be happy was intensive care. Yeh, guess was hassling you a bit. I don't regret anything on the internet. It's not real to my life. But I am not going to follow you anymore.

You might dislike it or not, i am older than you. More experience. You seem to put more effort in than most here. But you seem to have a chip on your shoulder. 4 years is nothing. I can see you being a good member. But you need to stop picking or to be kind to. Why not show always your helpful side. Even if you googled it for them. Tell them. Thats a great feature of a programmer. You are showing them they could of made the effort.

I have never said you do not know anything. But you need to realize you are still very new. You show you are keen. Now show a better side of you.

I will leave it as that. Internet arguing is boring. Now is an oppertunity to see if you make the same regard to me.
