Thread: [Allowing certain clients in IRC server \(UnrealIRCd\)](#)

Codexual - March 15, 2018, 4:43 am

So back then with the Unreal 3.2 or even UnK0wns modded Unreal, you're able to allow certain mIRC version clients only able to connect, even this was a function in the NzM bot. I am trying to figure out that function to only allow certain mIRC versions to able connect to an IRC.

Would that be in the unreal.conf, and if so what block script do I have to add, or is it running a command when the unrealirc services are running?

Thanks in advanced.
