[dns2proxy](#)

[SSL Strip 2](#)(Link is being fixed)

[Rufus](#)- Create bootable USB drives

[Kali](#) Linux OS

Step by Step

1. Rufus

Download [Rufus here](#).

2. Kali Linux OS

Download [Kali Linux ISO](#) on the official website.

3.Change the Boot Sequence to USB Pen drive in the Bios.

4. Boot on Kali Linux using the Rufus method below.

How to use Rufus.

Once the file downloaded you simply run the application. You should be able to figure this part for now. -_-

Kali
