Thread: [>>> \[TUTORIAL\] Prevent Bad YouTube Comments!](#)

BlueShiftXD - March 15, 2018, 10:39 am

What do you mean?

Have you ever uploaded a few CPA videos and you get all these comments saying "not working" or "fake"?

They are going to affect your conversion rate and EPC, you'll want to delete them regularly.

I bet you're tired of deleting those manually.

Here is a way to make YouTube do the work for you using their Community Settings.

Where to find this setting?

Log into YouTube and go to your Creator Studio.

Next take a look at the left side of the screen and click on Community then Community Settings.

You'll arrive at this page.

Now you can enter blocked words like "fake" and "not working". Of course there are a lot of other words you might want to block.

See my [full article](#) about this that includes my blocked words list.

I suggest you use the option to block links in comments so that others can't hijack your traffic and send them to their own landing pages.

Why is this useful?

This is useful because if you have lots of videos across multiple channels it will save you from logging into all of them just to delete some comments you don't really want there in the first place.

Now you can focus your time on more important things!

If you enjoy the content I put out on HackForums, click the button below to buy me a coffee!

I'm doing something like this on every video and on FB, too, so yeah definitely recommended =)
