Thread: [\[Methods\] 6 Spreading Methods || Free & Easy](#)

Thresh - March 20, 2018, 11:41 am

YouTube Video's

A very easy and effective way of spreading your rat is with YouTube video's.

For this spreading technique you need:

- Multiple YouTube accounts
- Download Host (Filedropper, Sendspace...)
- Video's

This rat spreading technique is extremely simple, even for the ones that are new to rat spreading!

For this spreading technique u to do this:

1. Look for expensive programs (Expensive antivirus, game hacks/mods, software or anything else)
2. If u found a couple of video's download them
3. Copy the description and title
4. Upload that exact video and add "[CRACKED]" to the title. (to see video tags use [this:https://goo.gl/1ugTgx](https://goo.gl/1ugTgx))
5. Add your download link to the video description.
6. Watch the rat spread like butter on hot toast!

U can upload the same video on other accounts for extra slaves!

YouTube Comments

A good way of spreading your rat is by YouTube comments.

For this spreading technique u need:

- Multiple YouTube accounts
- Download Host (Filedropper, Sendspace...)
- FUD crypter

This spreading technique is not used very often, it is really easy and effective.

For this spreading technique u to do this:

1. Make a FUD server.
2. Upload it to a free download page (<https://www.sendspace.com>, <https://www.up-4ever.com>, <http://zippyshare.com>)
3. Search for software cracks on YouTube (example: Antivirus Cracked)

4. Then mass-comment videos with your download links saying "This is a working download"! Make sure to use different YouTube accounts to prevent your comments being removed automatically.

Torrents

A very effective way of spreading your rat is with torrent websites.

What u need for this technique:

- A lot of torrent websites (not these huge known websites with a good protection, a list is at the bottom of the guide)
- File Pumper
- Fud Crypter (not necessary)

What u have to do for this technique:

1. Use a good file pumper to pump your file to a good size (1gb+ is recommended)
2. Fud crypt your rat (as said, not necessary)
2. Upload the pumped rat to many not very known torrent websites. (these smaller websites normally don't check for viruses)

This is a very effective way of spreading, it takes a lil' longer but it will definitely work!

Blogs

Another very effective way to spread your rat is using blog websites.

What u need for this technique:

- Blogspot, Textpattern, Blogger or Tumblr account (Any other blogging website should work)
- AddmeFast Account

What u need to do for this technique:

1. Make a small blog about the software crack/trial
2. Add screenshots
3. Add Download
4. Use AddMeFast to get more visitors.

Why blogspot? Blogspot websites are on the first few search pages almost 9/10 times. Easy and effective. Its there for ever!

Omegle

A harder way of spreading your rat is through Omegle.

What u need for this technique:

- Download Host (Filedropper, Sendspace...)
- Omegle chat bot (<https://goo.gl/S8sKSo> or <https://goo.gl/bs7D86>)

What u need to do for this spreading technique:

1. Upload your rat (Filedropper, Sendspace...)
2. Use the bot to automatically send a message like:"Hey, are you horny? Here is a pack of pictures from me"
3. Alot of guys/boys there are looking for girls on the chat version of omegle.

This technique is not effective at all. Its worth a try though, if u have a good story it should work!

Forums

Another good way of spreading is through forums.

What u need for this technique:

- Alot of forum accounts
- FUD crypter (this is a must have!)
- A couple of threads/posts (not necessary)

What u have to do for this technique:

1. Go to forums with young gamers as a target.
2. Post it as a hack, exploit or glitch.
3. Tell them to be quick otherwise it will be patched. (manipulate them!)
4. Do this on alot of forums and see the slaves count fly up!

This is a long time taking method, working though!

Sethmumu - March 20, 2018, 11:51 am

hey there, I would like the more details on the torrent spreading method, what sites you recommend to spread on?

CraftyBot - March 20, 2018, 11:53 am

Ahah, the youtube spreading method is used all the time. Also, these methods are common as hell, most people who uses any sort of rat most likely already used these methods.

Thanks for contributing though.

yeah ,but many people are autistic and don't know shit how to spread effectively on it. you need to be very creative for that and LEGIT!

shahwahababdul - March 20, 2018, 12:04 pm

wow nicely done bro would love to see more like these :D

Spreading through DOC macro's can get you a shit ton of victims.

Or spreading using emails that you get from leaked databases. Dude, I know REALLY good ways to spread which I use to make Monero.

It's easy as hell to spread if you're not retarded and have a brain.

yeah, but it's not easy man, you need a good letter and a proxy which doesn't go much into spam, if you are going to send spoofed mails from smtp to like 100k emails, and the db must not be outdated like shit from 2005 XD XD

This thread is rather directed for beginners. Obviously there are more advanced methods.

B-Connected - April 30, 2018, 1:23 am

really good thread thnx bro
