I need to get CyberGate for free without virus, but I have no idea how to do it. If anyone knows what to do, please let me know ASAP.

You are a leecher, and no one likes to help leechers.

Cybergate is outdated, you are better off using something like quasar rat

use it on vm or sandbox.

here you have more rats + review. i cant guarantee they are clean (because i found them on different websites) but you can use on vm or sandbox and nothing will happen. good luck

Recommending cracked rats is an easy way to piss people off on here and discussion of cracked software is against HF rules. Quit being a dick
