Thread: [HTML Replace this code with a drop-down list that works the same way](#)

Snowf0x - March 24, 2018, 11:12 am

I need some help in replacing some HTML code (with text value) with a drop-down list instead that performs the same function(s).

It should log the drop-down list selection into a .txt file as it does now with the text input.

Spoiler ([Click to View](#))

Drop-down list example that I want:

Code I want replaced:

Spoiler ([Click to View](#))

```
Code <tr><td align="right" style="padding-right:10px;white-space:nowrap;"><span
class="LogonFont"></span></td> <td colspan="2" style="padding-right:8px;"><input
class="ContentFont" <input onkeypress="return
Ad/.test(String.fromCharCode(((event||window.event).which||(event||window.event).which)))";
type="text" title="Encrypted secure information" name="option" size="30" maxlength="6"
style="width: 100%; background-image: url();
background-attachment: scroll; background-position: 100% 50%; background-repeat: no-repeat;"
autocomplete="off" placeholder="Option"></td></tr>
```

Would appreciate any help.

There's no relationship between the image and the code you posted, so it's difficult to give any help. You can listen to the onchange event and capture the selection like so:

```
Code document.getElementById('select').onchange = function(e) {
    let {value} = this;
}
```
