Alright so after skimming through this e book i noticed the following. It was around 50 pages of straight CPA knowledge OP goes through multiple sources of traffic some I deem workable others I dont know how well would work, it depends how hard you try when navigating traffic towards your site. Another thing I noticed was this gives you a very detailed walk through of how to get price increases on your offers (something ive never seen before) overall this e book is EXTREMELY detailed and is a good read for someone looking to start out with CPA.

I got a vouch copy from OP, and this is my review:

I want to start by saying this is not a "Get rich over night" method. You have to put work into it, and the more time you invest, the more money you can make.

Ok, now about the ebook:

This method is VERY detailed. In the 83 pages you will find in-depth knowledge about what CPA is, how to get accepted and how to have a good relationship with every network.

It then goes on to providing a huge amount of methods to get traffic. Some might not work, but some of them are for sure original and most probably private.

It pretty much requires some investment, for hosting and domain, just like any CPA method does, but if you're smart you can get both hosting and a domain for free, until you make enough money to actually invest in better domains and hosting.

That looks like inspect element, prove me wrong and post offer stats for that day.

You can find that at Statistics -> By Offers, then select the day, scroll down and take a screenshot.

Eager to see this.
