Thread: [NetSeal theme VB.NET](#)

gilles - March 25, 2018, 10:44 am

So when using the theme everything works, but when u save the project close it, and you wanna reopen the project the theme gets corrupted and wont work anymore.

Any fixes?

Let me look in my crystal ball and see what is wrong.

In all seriousness, we are not the support forum for the NetSeal theme. %95 of the people here probably never used the theme, let alone downloaded it or found the problem you are experiencing.

Build -> ReBuild the soluiton. close and reopen the form

th3s3cr3t0n3 - March 26, 2018, 1:52 am

Maybe try cleaning/rebuilding the project?

Maybe try above and also delete everything from /obj and /bin folders?

Let us know.
