Thread: [Is it worth upgrading from Pascal to Volta for 1080p gaming?](#)

PurlieuServices - March 25, 2018, 4:03 pm

Is it worth upgrading from a GTX 1080 to the next-gen Volta equivalent for gaming at 1920x1080?

The_Right_Stuff - March 25, 2018, 4:29 pm

Buying anything bigger than a 580 for 1080p 60fps was a retarded thing to do.

Buying a 2080 will be pointless unless your doing higher res gaming. You don't need 468x MSAA.

People upgrading to a 580 from a 560 for 1080p 60fps

"Oh boy I can turn on stupid lighting effects"

People upgrading to a 580 from a 560 for 1080p 144fps

"Oh nice I can run games at 100+ FPS"

Changing from a 1060 to 1080 or a 580 to vega for 1080p

"OH BOY I CAN CRANK UP MSAA TO MAX"

People upgrading to Vega 56 from the 580 for 1440p+

"Oh boy I can turn up stupid lightning effects"

People upgrading to Vega 56 from the 580 for 1440p+ 144hz

"Oh wow this looks great & performs well."

PurlieuServices - March 25, 2018, 4:32 pm

What was possible to max out at 1080p 5-7 years ago with the best hardware at the time, is not possible to max out current games at 1080p.

Arsenally - March 25, 2018, 5:22 pm

I don't think it'll be necessary or even worth it for quite a while.
