Thread: [I would like to create an application](#)

issou276 - March 25, 2018, 7:16 pm

Hi guys,

i would try to code a program
it could be
just entering an IP address,
it hack automatically the computer behind the ip address lol

test - March 25, 2018, 7:17 pm

That sounds easy to do I make these daily.

Mr Meeseeks - March 25, 2018, 7:26 pm

If you want to start programming, Java is not a bad place to start.

Ghost.13 - March 25, 2018, 7:42 pm

This is clear evidence that you're watching too much Hollywood buddy.

Riot - March 25, 2018, 7:53 pm

This reminds me of when I first found out about RAT's and I thought you infected someone by knowing their IP and an open port lol.

The GRim - March 25, 2018, 7:54 pm

I always thought that's how people hacked before I joined hackforums.

KyFu - March 25, 2018, 7:56 pm

Ya dude it's that easy 10/10 would recommend doing it.

Moxxi - March 25, 2018, 8:09 pm

they already made that program its called command prompt you can hack anyone with it you better get started

?ULL - March 25, 2018, 8:56 pm

This will do what you need it to do:

Open two command prompt windows, then do the following:

In the first command prompt, type the following:

Code Ping <target IP> -tThis initiates the connection to their computer, but next you have to ensure the connection is open.

In the second window type this:

Code ipconfig /flushdns
then do:

Code netsh winsock reset

Finnally, we need to ensure they cannot trace back to us, for this we need to remotely delete our IP from theirs.. Run the following:

Code netsh interface ip delete arpcache

If you ran these steps correctly, you should now be able to connect to their PC by doing the following. This will open a file explorer to their PC:

Fist, open the run window: [WINKEY] + R

Now, just do this: \\<Their PC>\c\$

If it does not work, try again.

Wow awesome tutorial dude, thanks for your effort. certainly going to prank my classmates during next lecture ? ?

Would you write another tutorial on how to show "OWNED" message with large font on screen??
I'm tired of using Paint to write it on their desktop background :/

SIM-3257834 - March 25, 2018, 10:03 pm

If hacking was this easy every operating system would be garbage and the NSA would be down daily. I think you should take a moment to think about what you just posted.

WRX - March 25, 2018, 10:08 pm

Please tell me this is a poorly executed joke

?ULL - March 25, 2018, 10:09 pm

Would suggest starting off with java or python mate! Potluck!

Bluffer - March 25, 2018, 11:04 pm

Nothing better than bored 12 year olds spending their Sunday evening (failing at) trolling other 12 year olds.
