Thread: [\[b\]\[ANN\]\[POOL\]attpool.com- NEW!!!Specialized Mining Pool For RavenCoin\(RVN\)\[/b\]](#)

attpool - March 27, 2018, 9:29 am

Come We are a new pool, specifically for RavenCoin (RVN) mining, so far, we've hit a few blocks, our rates are very low, only 1% or even free of charge, to solo for mining, is appropriate.

If you use Nvidia's graphics card, then use the ccminer algorithm to set up to x16r and set up your own wallet address. If you are using a AMD graphics card, you can use sgminer, and the way you set up is about the same. for example is :

For Nvidia : ccminer -a x16r -o stratum+tcp://attpool.com:3636 -u replace here with your wallet address -p c=RVN,worker=A001 (if your OS is based X64 then replace ccminer with ccminer-x64)

For AMD graphics you can replace ccminer with sgminer (or sgminer-x64 which depends on your OS)

We pay automatically every three hours, as long as your account balance is more than 0.001.

We are very glad to help you how to start mining, if what you need help, please send us an email: attpool@gmx.com, or twitter [#attpool](#) for us to communicate.
