Dopemine - July 6, 2018, 10:17 pm

Can you run multiple instances at the same time? Say I want to attempt to turbo several different usernames at the same time. How many can run before it slows way down? (say 2gb ram windows) Any bans, problems, etc. from running several on one ip?

Im wanting to run it via VPS

Dopemine - July 8, 2018, 6:13 pm

I'm getting a "err - 1 Report to dev" error when I try to login.

I recently had to change VPS so I had to move the HCID.. would this be the cause?

errr.. typo. I meant the HWID when I had to move to different computer.

My turbo is excellent, but I will always warn my customers it is not a perfect solution. There will always be inherent risk, even more so with such a sought after name. With that being said, people have successfully swapped thousands of names collectively worth tens of thousands of dollars if not much more.

Bigbossman009 - August 5, 2018, 9:19 pm

Thanks for the reply,

just to clarify. You are saying that people have successfully swapped 2 letter instagram names with your turbo before?

Im sorry you feel like its not fast. I should warn you that you cannot run multiple instances of the same turbo or any other turbo on the same computer, you will get poor results. If your internet connection and your computer are high quality than you should have no problems.
