Thread: [Cracking using Hydra](#)

SolomanTheKing - March 28, 2018, 4:24 am

dictionary attack on gmail account gives wrongs result using hydra.

How to crack gmail account ? I tried hydra. Is there any solution ?

What command are you using? are you following redirects? or perhaps have a success or fail message ..

Is that a direct copy and paste? if so

hydra -l somemail@gmail.com -P password.txt -s 465 -S -v -V -t 1 s smtp.gmail.com smtp

what is that bold "s" ? You already put in the port which is correct 465

(double checked here <http://pop2imap.com/thunderbird-gmail.php>)

Edit: Also I hope you are doing this against your own account, that should go without saying right.
