(Apr 5, 2018 04:09 AM)Aquirement Wrote: [\[CITE\]](#) il pm you the combo and proxy budThis is as fast as it can programmatically possibly be.

The speed is entirely dependant on your proxies and computer (amount of threads).

If you get many retries whilst running the program then the proxies you are using are not good.

Update will be released later today!

???????? - April 5, 2018, 8:36 am

Purchased 1 minute ago.

First time i opened the program, and uploaded the proxlist/combolist and pressed start, the program closed and asked me to upload the files again.

just re-opened the software, and retried.

Checking a 500k combilist atm.

Will let u guys know the outcome.. (running on a vps, so im not getting ther 100/s)

The update has now been released.

- The new "Frequent" tracker in the title shows how many "too frequent.." errors you've gotten. Getting many of these indicate that someone else is using your proxies or that you are using them too

- The following capture options have been added:

- The speed of the speed has been improved immensely via a little "bug" in Fortnite.

If you experience any issues with the update system then please message me and I will send it to you manually!

So far I've gotten 10 hits/100 tested, however I did notice using socks 4/5 proxies throws retries so I switched over to http and it works fine, proof:

Vouch For Coder, HQ AF ?

FortniteLegend9393 - April 8, 2018, 5:37 pm

Just bought this, already got a combo list I just need somewhere to buy decent proxies, anyone know a good place?

DeadJames - April 9, 2018, 5:17 am

Vouch! The program is actually pretty fast on checking accounts. (I'm impressed how fast it checks)

The pros of the program:

- > It isn't detected as a virus.
- > It's extremely fast.
- > A good choice of what you want the program to write down for you.
- > It's easy to use.

Edit: > Shows you a full list of commands which allow you to change the bot output. (E.G. email:username:pass)

Cons:

- > Support uses email which is okay but discord or something would be more helpful.

Overall:

Looks: 9/10

Support: 8/10

Quality (Speed): 10/10

Language (Grammar): 10/10

In total I do recommend you buy this. Which will also support the developer/s a ton for this amazing piece of programming.

Personally even looking forward to see his next projects.

gefax - June 3, 2018, 3:17 pm

Purchased this, it's pretty nice (:

SIM-1230922 - June 3, 2018, 4:39 pm

I have finished all my exams so I will be pushing the new update very soon.

I apologise for the lack of support, but I have answered all support messages sent to my contact mail address and on Rocketr.

The new update will make the program SIGNIFICANTLY faster because it uses what can be considered as an exploit with Fortnite's launcher and website. This should sort out the immense retries issue. Another reason for why it is taking so long is because I am updating my licensing API so everything will be more secure.

Hysteriqu1 - June 8, 2018, 8:21 pm

Still working fine? When is the update coming. Thinking about purchasing

iShortz - June 24, 2018, 7:37 am

does this still work or nah?

-PUBG- - June 27, 2018, 1:07 pm

I bought it but it seems to be running extremely slow compared to others I have tried.

EDIT:

Yeah the other one I use that is free checks them all just fine with the proxies I have etc This one just gives constant retries, Only did about 100 retries after a min on 500 threads. Doesn't seem to work very well.

I think I got it working better now, It would be useful if it had what I have seen others post which is past purchases how much it was etc etc

EDIT:

Another update, After it checks so many it freezes completely can't move it etc.

zxcooneyxz - June 28, 2018, 5:24 pm
