Thread: [Crack my first encryption ever](#)

ChaosXTP - March 28, 2018, 8:43 pm

This is the first encryption i've ever made, so I expect some flaws.

If you manage to decrypt it, critique me however you want, I'd like some advice.

Code

```
[135][120][220][652][225][195][135][100][165][150][190][225][125][170][185][225][110][185][100][110][150][140][165][130][225][160][220][225][125][140][185][190][195][225][120][205][120][185][225][120][165][110][185][220][175][195][140][170][165][225][145][200][190][195][225][165][120][120][115][120][115][225][195][170][225][150][165][170][210][225][140][125][225][195][135][140][190][225][210][100][190][225][190][120][110][200][185][120][654]
```

Edit: Just realized, there was a flaw in how I encrypted it, that made an encrypted char repeat.
Fixed now.

I decided to encrypt everything using numbers. Characters are represented in the encryption in between '[' and '']'
