Thread: [Simple Taskmanger with Taskkill-function](#)

1337LnD - March 30, 2018, 12:41 pm

Hey guys,

I just created a simple Taskmanager. It lists all active tasks and you are able to kill a task by writing it's name.

I hope that the source will be helpful for people who want to learn more about batch-programming.

Here's the code. Simply copy it into a textfile and save it as .bat

Code @echo off

set ver=1.0

title Taskmanager %ver%

cls

del tasklist.txt

del temp.txt

for /f %%x in ('tasklist /fi "status eq running") do echo %%x >> tasklist.txt

sort tasklist.txt > temp.txt

cls

echo ----- Taskmanager %ver% -----

echo by 1337LnD for Hackforums.net

echo.

echo Runnings Tasks

type temp.txt

echo -----

echo The running tasks are listed above

echo.

echo If you want to kill a task, please write it's name

echo If you just want to quit, write "exit"

:Action

set /p taskkill="Taskname: "

:Kill

if "%taskkill%"=="exit" goto Exit

tasklist /fi "imagename eq %taskkill%" |find ":" > nul

if errorlevel = 1 (

taskkill /im %taskkill%

echo "%taskkill%" was sucessfully killed!

echo.

echo If you want to kill another task, please write it's name

echo Otherwise just write just "exit"

set /p taskkill="Taskname: "

goto Kill

) else (

if errorlevel = 0 echo Error! The Task "%taskkill%" was not found. Try again.

goto Action

)

:Exit

```
del tasklist.txt
del temp.txt
exit
Enjoy! ?
```

Sir-Teabag - March 31, 2018, 12:23 am

I'm just getting continuous errors when I attempt to run it? I read through the script but couldn't find where the problem was though.

Phlox - March 31, 2018, 7:47 am

I have modified your batch script and now it works.

```
Code @echo off
set ver=1.0
title Taskmanager %ver%
```

```
Cls
for /f "Tokens=*" %%x in ('tasklist /fi "status eq running") do @Echo %%x
```

```
echo.
echo.
echo ----- Taskmanager %ver% -----
echo by 1337LnD for Hackforums.net
echo.
echo Runnings Tasks
```

```
echo -----
echo          The running tasks are listed above
echo.
echo          If you want to kill a task, please write it's name
echo          If you just want to quit, write "exit"
:Action
set /p taskkill="Taskname: "
:Kill
if "%taskkill%"=="exit" goto Exit
tasklist /fi "imagename eq %taskkill%" |find ":" > nul
if errorlevel = 1 (
taskkill /im %taskkill%
echo "%taskkill%" was sucessfully killed!
echo.
echo          If you want to kill another task, please write it's name
echo          Otherwise just write just "exit"
set /p taskkill="Taskname: "
goto Kill
) else (
if errorlevel = 0 echo          Error! The Task "%taskkill%" was not found. Try again.
goto Action
)
:Exit
```

exit

goto Action
)
:Exit
```

```
exit
which version of windows are you using? I'm just getting a blank terminal
https://gyazo.com/e5a1c12420b16dc7f682db7f74447ead
```

Phlox - April 1, 2018, 4:21 am

Windows 10 Pro 64-bit.

1337LnD - *April 2, 2018, 12:23 pm*

I'm using Windows 7 64-bit and it is working fine. I haven't tested it on other machines.
