Pricing depends on difficulty. You must provide me with:

- Code 1. A giftcard format
 2. A valid giftcard
 3. A page to check/redeem the giftcard
- I've written one for MyProtein and I'm looking to expand my empire.

Payment is after I finished the code and it works.

Meow - March 31, 2018, 8:35 am

Nike/Adidas one? Should be fairly simple imo

It works and it's proxyless without captcha I guess.

PM me with details and I'll try.

lance4182 - March 31, 2018, 9:42 am

good luck with sells my friend.. There are many such sites that are crackable easily.. it's hard to crack big ones.. and specially those which has pin.. and captcha on each request sucks..

Just use a captcha solving service. Anyways. I heard Amazon giftcards need to be "activated" before use. So I doubt a cracker for this would be possible

I mean if you want all of em redeemed on your own account. but I personally think the gc difficulty

would be too hard to get cracked.

you're a big hacker thats why >:(

Not looking to support Recaptcha atm, I know I can just use DBC but it'd be too costly anyways for actual proper usage.

Working on Zalando right now, no captcha etc.

Yeah it's completely working and returning valid values but I need example zalando gcs to make it 100% perfect.

Lickitup - April 1, 2018, 3:43 pm

When you make it perfect please tell me, im interested.

Do you know the format for a zalando GC?

Doesn't have to be real just need if they use numbers, alphabet, lowercase uppercase etc.

Lickitup - April 1, 2018, 4:49 pm

i have no idea, probably numbers and uppercase numbers

I mean the checker is already working 100%, I'm working on the code generator right now but I have no idea what format I should insert.

It'll be fine for now if you have your own list of possible gcs.

Uppercase only? It's possible but the chance of you getting a valid one is low unless zalando premakes all giftcards then it's really easy.

?ord Frieza - April 1, 2018, 6:27 pm

Zalando discount codes (-10% the entire order etc.) are that format, actual giftcards (cadeaubonnen) (preloaded with 20 euros etc.) are 16 numbers and always start with 63765002, which should make cracking them really fucking easy lol

Used cards:

Got loads of more cards from other sites if u need em

How much for the Zalando checker btw

Go to the page where you can redeem your giftcard and see if theres no recaptcha lol

Hoodie+ - April 2, 2018, 6:10 am
Amazon gift cards have 16 letters or numbers, that's 36 possibilities.
36 to the power of 16 is 7958661109946400884391936.

What are the chances of your program guessing a correct number of 7958661109946400884391936 possibilities?

There is a higher chance of you being born with two dicks than cracking the code.

Finished the juulpod cracker, everything working correctly. Going to work on zalando right now and

do some research.

Almost thought that it wouldn't work but it was just me being dumb lmao.

Zalando requires a account for the damn activation thing. goddamnit working on that right now.

Don't think Zalando is going to work unless you know how to insert cookies. with a pre-made account.

moore's law is a thing and distributed computing is a thing, how do you think cracking botnets work, it all depends on the server specs and a few other factors on how many card values can be checked a second, every place is different but amazon's a huge site they probably run it on a dedi with crap tons of ram and even if they don't they use a load balancer meaning if one server gets overloaded your http requests will get diverted to a different server, it also depends on if the server gets slow enough to where the sysadmins check the httpd logs and notice crap tons of requests, from there they will pull the web app down from prod and add a captcha and rate limit or something so

definitely possible is it feasible short term? probably not unless you're patient to wait for hits, if people are getting 1-2 a day like was claimed then thats still good odds. His zolando cracker has 5 users at 1 million requests/responses an hour thats about 5 million an hour across all users, theres very good odds one or more of those people are seeing hits daily but then again zolandos entropy is slightly less then amazons but the same logic applies.

Steam unless you get a url that can check keys every time is impossible unless u want to wait 15 minutes per 10 codes checked.

This basically and their format makes it really hard to get a possible result.

You were able to crack a 22 character long code that has a charset with the size of 7 characters?

You probably meant 22^7

The codes are made so they are not crackable, I don't believe you were able to crack a gift card from a worth while company.
