Thread: [Submit button not working inside template](#)

FaberCastell - April 2, 2018, 4:40 pm

So basically i have a html template, this site (<http://grandetest.com/theme/jobhunt-html/contact.html>)

And the problem is, when i add a simple PHP submit form, it just doesn't works. When you click on the button, nothing happens.

If i copy the same code into another standalone file, the form is submitted, but with using on the page of the template, on the click of the button, nothing happens.

I really don't understand why is it so and it's testing my nerves. Any ideas perhaps?

ThomasGB - April 2, 2018, 4:41 pm

come online on jabber or skype we will try to fix this together

? **Soufian ?** - April 2, 2018, 4:42 pm

Did you put it in a <form> tag and gave the form the attribute method="post" as well as gave the button the attribute type="submit"?

Nachfolger - April 2, 2018, 4:51 pm

There is no form attribute. The browser doesn't do anything with a standard button tag.

Also looks like it's made to be sent over a ajax request. You should consider implementing Ajax instead, it's much better looking and it would match the material theme.

Vyxn - April 2, 2018, 10:54 pm

Code <form>

```
<button type="submit">Press me baby.</button>
</form>
```

This should be the format for it to work. The default method will be GET unless you changed it to POST (method="POST")

Let me get my cristal ball to find your problem without any code!

SIM-2223238 - April 2, 2018, 11:40 pm

Are you sure your file extension is .php? lmao
