(Apr 5, 2018 12:38 PM)goofdunk Wrote: [\[CITE\]](#) Just purchased JPS Trigger and this program is crazy man, for being pixle based, it is extremely accurate and fast. Tried his free version and this premium is night and day difference. JPS guided me through the setup of the program and it is really easy to use. Works especially well on Zenyatta, McCree, Genji, but realistically works on any character.

(Apr 5, 2018 01:24 PM)CouncilSlayer Wrote: [\[CITE\]](#) So here's my review of the premium package.

9/10 would recommend the premium for a low low price of \$20 for lifetime. The seller is very nice and helpful. As soon as I added him on skype, he answered right away and got me all squared away. I had a slight issue with starting it, but he got me on the right track. The seller was even open

to feed back and if I had any feature ideas to let him know. Very genuine user and I wouldn't delay in buying this right now.

When I first saw the thread, I thought everything was very simple and even though there was a free version, we all know the premium versions are way better, especially when the seller openly tells you that, which is very nice.

On first start, the premium version is IMMEDIATELY different and way better. It provides a different GUI, is more lean and gives additional options to change the X,Y values for aiming.

That's a very big difference because you can change those values to get an even more customized setup for your characters, especially for where you're aiming.

I immediately ran into the training range and obviously started with widow.

It's very hard to review the premium without being bland and saying it's just significantly better. Some characters have a very big difference and I'll name those

Widow: The response time between shots, and the initial shot going out are considerably faster. Even the rapid fire without being zoomed in, is way faster and noticeable between versions.

Soldier: The difference between premium and the free is uncanny. If you want to use the triggerbot with soldier, you definitely need to get the premium version as it's a huge difference.

Orisa: Definitely more bursty in the premium version, less delay. With the free version, you'd probably die before they got to you. In the premium, you have a chance.

McCree: is still nasty in the free version, but it tends to delay longer. In the premium version, I can snap open someones head like butter real quick.

Everyone basically is a bigger upgrade in the premium, and you definitely need to upgrade if you want to be a force to be reckoned with.

You can find my free version review [here](#):

The free version review is more in-depth but that's only because the premium is the same thing except the specific chars I mentioned here and the delays being faster in the premium.

TL;DR Buy this shit right now for \$20 for lifetime, it can't be beat, and I'm sure it will be a monthly charge soon because it's too good.

(Apr 5, 2018 01:54 PM)Aggron Wrote: [\[CITE\]](#) Getting this after knowing if it's safe to use or not on my main.

JPS Trigger (Premium & Free) are 100% safe to use, no matter what league you play in.

The triggerbot doesn't send any commands to OW it's completely pixel based and it does bypass and prevent the pixel lock from happening, this is also confirmed by some in my free version thread.

Feel free to request the Free version to try it out, keep in mind that there are major differences in results when you compare the Free & Premium version.

any videos of this? Also, would like to use the premium version for a day or so to try it out and see if it's worth the lifetime price.

Is there a chance I can pay a smaller amount to use the premium version for like a day?

I only charge 35\$ for lifetime, others charge that per week and arent even pixel based.

The Free version is the test version, the results are slower and less accurate but it gives you a proper idea of what the tool is about.

I'll send you the free version through PM.

And on request of previous customers the price can eventually increase even a bit more once the upcoming premium update is done, keep in mind it's lifetime not weekly or monthly. ?

CouncilSlayer - April 6, 2018, 11:02 am

You guys need to stop being penny pinchers. This is a good LIFETIME product.. \$35 for lifetime isn't even bad... that should be monthly honestly.

Burst/Spray (Pro/Noob) mode

Trigger hotkey

Potentially first (few) Heroes profiles (With main focus on Anna & Widow atm)

Sensitivity Adjustment

Manual trigger adjustment + manual profile saving

And potentially other features aswell.

Once this version is released the price will be increased to \$50 for new customers (lifetime)
Previous customers will automatically receive the next update for free.
