Thread: [Jump to modified reputation page from Alerts](#)

Cammy - April 7, 2018, 8:31 am

Would it be possible to make it so that whenever you get a Modified Reputation alert, clicking it will direct you to the reputation page where the modified rep is?

No clue if it's difficult to implement but I suppose it could come in handy for people who have lots of reputation.

M?xim - April 7, 2018, 8:34 am

That'd require reps to have an ID like posts and profiles. Would be cool but not doable

They do afaik

Otherwise the report button would be useless i suppose

I looked into this. The problem is the reputation link has to know what page to go to. So it's not really a matter of the rep id but which page to send you to.

My Alerts is a plugin that only barely functions and in 3 years has not done a good job of expanding or touching up some of its features.

That'd be good as well. Out of 25 reps you should be able to find the name you're looking for quite easily.

Well from what I understand Omni is saying that there's no real way to determine on which page the modified reputation is

I was thinking of somehow getting the amount of reputations the user in question has, sort them and split them in parts of 25 (pages) and then based on the id determine in which part (page number) the modified reputation would be at. But it sounds hacky and not worth the hassle if such thing is even possible lol

Yeah I suppose fixing the actual plugin to be more reliable/stable etc. has a higher priority. ?

Omniscient - April 7, 2018, 12:53 pm

Well it's possible but not without heavier modification and wasteful queries. Everything is possible given the right code but some stuff just isn't plausible. This being one of them.

Cammy - April 7, 2018, 12:56 pm

I suspected as much.

Closing since it looks like the costs outweigh the benefits
