Thread: [Searching for sharing desktop screen over socket](#)

maype - April 8, 2018, 7:48 am

Hi guys,

I already seen in in this section. Basically Im searching for a source with client and server that can share desktop image or any image thru a socket connection.

I searched on the forum but found nothing....

If anybody can find it or have any ohter link to point out for a good source.

Thanks in advance

Maype

Searching for something a little bit more advanced ...

gigajew - April 8, 2018, 8:38 am

You got the base code for getting it working, you can make it more advanced yourself

If you want to go more advanced, then instead of that example where you send raw Bitmaps over, you can use a standard socket connection and send only the changed bytes over. You can use UDP for speed, and use CRC or any other algorithm to check for package integrity.

Forgot to mention, you want to look into XOR for detecting changed bytes. That is all the help you get for now. Good luck! 8^)
